

Signmaster Systems Is Offering UV Print & Cut and Resin Print Solutions from Roland Printers in Shropshire

February 06, 2023

February 06, 2023 - PRESSADVANTAGE -

Signmaster Systems, a wide format printing specialist in Shropshire, UK, is bringing world-class printers and inks from Roland DG to local clients. The company is urging interested customers to visit its website and browse through its comprehensive media, ink, and hardware products and services.

Signmaster Systems has been the trusted provider of wide-format printing services in Shropshire for over two decades. The company's client base has steadily grown over the years on the back of its supportive customer care and high-quality prints. It offers free delivery of inks and media, with next-day delivery on most services. Even Roland Printers, the Japanese leader in printing technology, has acknowledged the work that Signmaster Systems does by awarding the Shropshire printing company the "Roland Number 1 Hardware Dealer in the UK" award for two consecutive years. The company also secured the Gold Trusted Service Award from the consumer ratings and reviews platform Feefo.

The Roland AP-640, one of Roland's popular resin printing solutions, is being made available to Signmaster Systems customers. The printer, which uses instant-drying water and resin-based ink, offers greener printing for clients who value sustainability. The ink has no odor and is even optimized to retain heat in the dryer to reduce energy wastage. The resin printer is perfect for creating wallpapers, canvases, POS, banners & signage, window graphics, exhibition graphics, backlit graphics, vehicle graphics, and more.

The spokesperson for Signmaster Systems explains the benefits of the Roland AP-640 by saying, "The Roland AP-640, which has a 64-inch (1,625 mm) print output, uses odorless 700cc inks and can be automatically calibrated. The environmentally friendly resin ink gives you a vibrant finish that makes your promotional material pop. The machine itself is easy to set up and operate, prints at a rate of 14.7 sqm per hour, works with a standard power supply, has excellent reliability, and the long-life print heads will serve you for years."

Signmaster Systems also offers UV Print and Cut printing solutions, the Roland MG-300 & MG-640 from the MG lineup and the Roland LG-300 & LG-540 & LG-640 from the LG lineup. They are ideal for producing custom labels, packaging prototypes, decals, POS, banners & signage, wall deco, window graphics, exhibition graphics, backlit graphics, and more.

Both printer lineups use Roland's latest EcoUV 5 inks, have a compact design, are very easy to use, and are considered very reliable. Moreover, with low running, maintenance, and repair costs, they offer customers a high ROI. MG and LG lineup customers also get to enjoy the company's RolandDG Connect software, a machine monitoring app that lets them remotely monitor the progress of their work. The printers in the lineup come in white and gloss options and red and orange ink options.

The spokesperson talks about the MG and LG lineup by saying, "The MG-300 & MG-640 offer entry to mid-level quality printing with benefits such as instant curing/no gassing-off, instant finishing, high scratch resistance inks, same-day turnaround times, and a reduced need for lamination. For customers who need the best in UV printing and cutting, Signmaster Systems offers the Roland LG-300 / LG-540 / LG-640 lineup for mid-level to production quality prints. The LG lineup's two print heads deliver high-speed prints up to 31.9 sqm per hour and offer other high-tech features including a touchscreen control panel, automatic calibrations, and presets for high productivity with minimal experience."

Shropshire clients who are strapped for cash can rely on Signmaster Systems' fully refurbished second-user printer and finishing equipment inventory to solve their printing problems within budget. Known for being upfront and honest while providing expert advice, the company ensures that its customers are satisfied with every hardware purchase. It backs up its quality printers, both new and refurbished, with optional training and installation, free technical support, live demos before purchase, monthly training days, and servicing offered by a dedicated technical team.

Readers in Shropshire can contact Signmaster Systems at 01948 662669 to get hardware and service quotes.
