Apopka Tree Experts Goes Green with the Implementation of Electric Equipment for Tree Maintenance

February 21, 2023

February 21, 2023 -
Apopka, FL ? Apopka Tree Experts, a local tree service provider, recently announced they have gone green with the implementation of electric equipment for tree maintenance. In addition, Apopka Tree Experts has invested in eco-friendly tools to use during their services as part of the company's commitment to sustainability and protecting the environment. This move is expected to reduce carbon emissions by up to 70 percent, depending on the project.

Apopka Tree Experts decided to switch to electric equipment to reduce their impact on the environment. Not only does this reduce carbon emissions, but it also minimizes noise pollution and improves air quality.

The company has invested in eco-friendly tools such as cordless chainsaws, pole saws, and tree pruners that operate using battery power instead of gas or oil. This allows them to provide their services without relying on fossil fuels which contribute to air pollution and climate change.

As part of their commitment, Apopka Tree Experts has also taken steps to ensure that their new electric equipment is appropriately disposed of when it reaches the end of its lifespan. By doing so, they can help reduce the amount of e-waste that ends up in landfills. The company is expected to benefit from cost savings and improve its environmental impact with this move towards greener operations.

"We are proud to be leading the charge regarding environmentally conscious tree care," said Brittany Kelsey, CEO of Apopka Tree Experts. "Our new electric tools are better for the environment and provide optimal performance while keeping our clients and employees safe from harmful fumes. We are excited to continue making progress towards a greener future."

More information on how Apopka Tree Experts is improving its services can be gleaned here: https://www.treeexpertsorlando.com/apopka/.

The move to electric equipment will allow Apopka Tree Experts to provide more efficient and cost-effective customer service. While most internal combustion engines can take up to 30 minutes to start after being idle, electric equipment can be started in under 10 seconds. This reduces downtime between jobs and increases efficiency. In addition, electric tools are quieter, meaning there will be less disruption for neighbors and homeowners.

Electric equipment powered by rechargeable batteries not only creates a safer working environment but also eliminates the need to purchase and store large amounts of fuel. It also reduces the risk of hazardous material exposure for workers and eliminates the possibility of any fuel spills. This can be particularly beneficial in outdoor work environments where potential damage to vegetation could occur.

All these advantages make electric equipment a much more desirable option for customers looking for environmentally friendly solutions with low-risk financial investments. In addition to creating a healthier work environment and reducing air pollution, electric equipment helps conserve resources, saving time and money compared to traditional fuel-powered alternatives.

Apopka Tree Experts also plans to replace all gas-powered vehicles with rechargeable electric models as part of their green initiative. This decision will further reduce the company's carbon footprint while providing an additional layer of safety for its employees.

"At Apopka Tree Experts, we are committed to providing our clients with quality service that is both efficient and environmentally friendly," said Kelsey. "We believe this switch to electric equipment and vehicles is an important step towards achieving our sustainability goals."
