

Belmont Dental Offers High Quality, Cost-Effective Dental Implants in Perth

February 21, 2023

February 21, 2023 - PRESSADVANTAGE -

Belmont Dental Surgery, a premier dental practice located at 171 Belmont Avenue, is pleased to announce that they offer high-quality dental implants in Perth, WA. The dental implants are a permanent solution for those who want to improve their appearance and regain their confidence.

Dr. Kent Tan, the spokesperson for Belmont Dental Surgery, said: "Belmont Dental Surgery team is excited to offer patients affordable dental implants that feel and look like natural teeth. The team's goal is to help patients regain their confidence, and dental implants are a great solution for those who have lost one or more teeth due to an accident, illness, or wear and tear."

At Belmont Dental Surgery - Dental Implants Perth, the dental implant treatment is one of the most popular and effective ways to replace missing teeth. Dental implants are small titanium posts that are placed into the jawbone to replace the root of a missing tooth. A small metal connector, an abutment, is placed on top of the dental implant to hold the new artificial tooth or crown.

Dr. Kent Tan further stated: "Belmont Dental Surgery take great pride in offering high-quality dental implants

that are virtually indistinguishable from natural teeth. Belmont Dental Surgery's dental implants are strong, durable, and can last a lifetime with proper care. Belmont Dental Surgery also offer financing solutions to make dental implant treatment more affordable.?

Belmont Dental Surgery has been owned and operated by Dr. Ben Campbell since 2000. The practice is accredited and is fitted out to a high standard with digital x-rays and OPG for increased patient safety and convenience. The friendly team of dentists carries out a full range of general dental care and treatments to optimise oral health.

Dental implants in Perth have many benefits, including improved oral health, enhanced appearance, improved speech, enhanced comfort, and durability. Unlike removable dental prosthetics like dentures or bridges, dental implants can be cleaned with regular toothpaste. This reduces the risk of gum disease and tooth decay.

The dental implant procedure typically involves the placement of a metal post (the implant) in the jawbone, which is left to heal before attaching a replacement tooth to the post. The process is typically completed over the course of several visits, and it may take several months for the implant to integrate fully with the jawbone.

At Belmont Dental Surgery, patients can rest assured that they are receiving the best dental implant treatment from highly skilled and experienced dentists. The practice is conveniently located near the Belmont Forum shopping center, and there is ample parking at the rear of the building. Belmont Dental Surgery can be reached by phone at (08) 9277 3837 or by email at info@belmontdental.com.au
