

Toronto Functional Medicine Centre Explains the Benefits of ATP IV Therapy in Toronto

April 20, 2023

TORONTO, ON - April 20, 2023 - PRESSADVANTAGE -

Toronto Functional Medicine Centre (TFMC) in Toronto, ON, Canada, has recently published a blog post that explains the importance of ATP intravenous therapy in Toronto. Adenosine triphosphate (ATP) intravenous (IV) therapy may help with tissue repair after strenuous workouts. ATP takes the energy that is produced from the breakdown of food and makes this available to other processes involved in cellular functioning, such as cell metabolism, physical movements, or brain function. With regards to its therapeutic benefits, it has been observed that it may offer advantages for muscular performance, cardiovascular health, body composition, muscular performance, and recovery.

Studies have shown that ATP supplementation may have several health benefits. One benefit is the possible improvement in muscle health for improved physical performance. Second, it may also promote athletic recovery. Anaerobic exercises tend to decrease ATP levels and according to a study from the Journal of the International Society of Sports Nutrition, it usually takes some time to bring those levels back up. However, ATP supplementation may help the recovery process. Third, ATP may possibly help improve cardiovascular health. Studies have shown that ATP may affect cardiovascular health, specifically in dilating/ constricting the heart and also in blood vessel repair. Fourth, ATP may help in reducing pain and fatigue in fibromyalgia

patients.

For those who are interested in ATP supplementation, consultation with a functional medicine practitioner can introduce the patient to supplemental precursors of ATP while taking into account health goals. The patient may be advised to choose foods that are rich in particular nutrients like copper, D-ribose, omega-3 fatty acids, pyrroloquinoline quinone (PQQ) or CoQ10, which are all essential nutrients involved in the production of ATP.

The functional medicine practitioner may also recommend oral supplements that contain ATP precursors and/or ATP IV therapy. IV therapy drips may be recommended for people who can't properly absorb oral ATP supplements because of certain chronic health issues, such as Celiac disease. With IV drips, the nutritional formula bypasses the gastrointestinal system and goes directly into the bloodstream.

At the TFMC, the health advice and IV drips they provide will be personalized for each patient using an integrative functional medicine approach. Along with a healthy diet and regular physical activity, IV vitamin infusions may help in improving wellness.

They regard each patient as unique, thus they provide custom-fitted health care, taking into account the patient's lifestyle, genetic, biology, and environmental conditions to address health issues like blood pressure levels, immune function, oxidative stress, autoimmune conditions, chronic fatigue syndrome, adrenal function, depression symptoms, acute illness, much-needed energy, and substance withdrawal symptoms.

It is important to note that the IV therapy drips provided at the TFMC are freshly compounded and no preservatives are added. They prepare the IV treatments based on the principles of functional medicine, which enables them to cater to the specific requirements of each patient.

The Toronto Functional Medicine Centre in Toronto, Ontario, Canada, applies an integrative functional medicine approach combining integrative functional medicine, which includes acupuncture, bio-identical hormone replacement, detoxification, naturopathic medicine and more. These approaches can be applicable for a wide range of health disorders, like: postmenopausal health issues, acute health issues, pain, hormone imbalances, and more. They may also offer help with: tissue repair, athletic recovery, cellular damage, infertility, thyroid conditions, immune function, chronic fatigue, mineral deficiencies, skin rejuvenation, adrenal function, and more.

Those who want to know more about intravenous therapy, such as IV therapy with taurine in Toronto and other nutrients, can check out the Toronto Functional Medicine Centre website or contact them on the telephone at (416) 968-6961 or through email at info@tfm.care. They are open from 9:00 am to 6:00 pm on Mondays, Wednesdays, and Fridays; from 10:00 am to 5:00 pm on Tuesday and Thursdays; and from 9:00 am to 4:00 pm on alternating Saturdays.
