

## **Belmont Dental Surgery in Perth Now Offering Invisalign to Enhance Smiles**

*February 27, 2023*

February 27, 2023 - PRESSADVANTAGE -

Belmont Dental Surgery, a leading dental practice in Perth, is now offering Invisalign treatment to enhance smiles. Invisalign is a revolutionary alternative to traditional braces that uses clear, removable aligners to gradually straighten teeth.

Dr. Kent Tan, spokesperson for Belmont Dental Surgery, explains the benefits of Invisalign: "Invisalign treatment is a great option for people who are looking for a more discreet way to straighten their teeth. The aligners are virtually invisible, so most people won't even know if someone is wearing them. In addition, they are removable, so one can eat and drink whatever they want and brush and floss their teeth with ease."

The Invisalign system uses a series of clear, custom-made aligners that are worn for about two weeks and then replaced by the next in the series. As each aligner is replaced, teeth gradually move into place. The entire treatment process typically takes 9-15 months, depending on the severity of the case.

Dr. Kent Tan also discusses the future outlook of Belmont Dental Surgery: "The team is excited to offer Invisalign treatment to patients, and they look forward to continuing to provide high quality general and

cosmetic dentistry in a friendly, relaxed environment. Belmont Dental's goal is to optimise their patients' oral health and provide them with access to the best possible oral health care options."

Belmont Dental Surgery is an accredited dental practice with a high standard of patient safety and convenience. Located at 171 Belmont Avenue in Perth, there is ample parking at the rear of the building. Dr. Ben Campbell has owned and operated the practice since 2000, providing high quality general dentistry in a friendly, relaxed environment.

Invisalign Perth treatment is often used to treat mild to moderate cases of misaligned teeth. It is a great option for people who are looking for a more discreet way to straighten their teeth. With Invisalign, patients can smile with confidence and customise the alignment of their teeth to create a more natural-looking appearance.

In addition to Invisalign treatment, Belmont Dental Surgery offers a wide range of other dental services, such as whitening, exams, and extractions. The clinic is committed to providing high quality dental care to its patients and works closely with dental specialists to ensure they have access to the best possible oral health care options.

For those interested in Invisalign treatment in Perth WA, the cost varies depending on the level of teeth correction required, the length of treatment, and whether any extra services are needed. However, the benefits of Invisalign are numerous, including ease of use, convenience, minimal pain, and excellent results when used in conjunction with regular visits to the dentist.

Belmont Dental Surgery clinic is located at 171 Belmont Avenue, Belmont WA 6104, and can be reached by phone at (08) 9277 3837 or by email at [info@belmontdental.com.au](mailto:info@belmontdental.com.au)
