

Lexington Tree Experts Introduce New Service to Combat Spread of Invasive Pests and Diseases

March 01, 2023

March 01, 2023 - PRESSADVANTAGE -

Lexington, KY ? Lexington Tree Experts, a leading provider of tree care services in the Lexington area, has announced introducing a new service to combat the spread of invasive pests and diseases that threaten local tree populations. In response to an increasing number of reports of infestations, the company is now offering a comprehensive approach to tree health management.

The team at Lexington Tree Experts has developed a customized program that begins with inspecting the trees on a property. Next, the experts will assess the health of each tree and look for signs of any potential threats.

Once the trees are identified as being at risk, they will work with the property owner to create a plan for protecting and maintaining their trees. This could include regular pruning, fertilization, mulching, and insect control measures.

Additionally, Lexington Tree Experts offers consultations that focus on educating homeowners about proper tree care techniques, helping them recognize potential problems, and giving advice on how to respond appropriately. Finally, the company is providing follow-up visits to ensure their clients are taking steps to promote healthy tree populations in their environment. Through this comprehensive approach, Lexington Tree Experts hopes to positively impact local ecosystems by decreasing the spread of pests and diseases.

"At Lexington Tree Experts, we take tree health seriously and want to do our part to protect Kentucky's trees," said Emmy Jessica, CEO of Lexington Tree Experts. "We recognize that many factors contribute to the rise in tree illnesses and infestations, including climate change and habitat destruction, but our goal is to work with homeowners and property owners to help them protect their trees from these threats."

Lexington Tree Experts' new service will focus on identifying and eradicating invasive pests and diseases that are particularly damaging to local tree populations. The company will use a combination of targeted treatments and preventive measures to protect trees against these destructive forces.

"We have been working hard to develop this program to provide our customers with the best possible protection for their trees," said Jessica. "We understand how important it is for people to keep their trees healthy and safe, and this new service provides us with an opportunity to help them do just that."

In addition to their new tree health management program, Lexington Tree Experts offers a wide range of services, including tree trimming, pruning, removal, stump grinding, fertilization, and more. They also specialize in emergency tree care services and offer 24/7 support.

"At the end of the day, our priority is customer satisfaction and safety," said Jessica. "We want our clients to feel confident knowing they have a trusted partner in us when caring for their trees. We look forward to helping more people protect trees from invasive pests and diseases."
