RoofTec Precision Exteriors Offers Arvada Solar Roofing Installation Services

March 17, 2023

Arvada, Colorado - March 17, 2023 -
RoofTec Precision Exteriors is pleased to announce that they are offering solar roofing installation services in Arvada, which is a home rule municipality in Colorado with a population of 124,402 in the 2020 US Census. They have partnered with GAF Energy to offer the brand new GAF Timberline Solar Shingle system. This energy-producing solar roof is designed to help the homeowner save on electricity costs through the production of clean energy that can decrease the home?s monthly electric bill.

The new GAF Timberline Solar Shingle system has been designed to make the roof look attractive and at the same time use natural resources to produce clean electric energy. These solar shingles are attractive, quiet, and designed to be installed just like any other type of roof shingles that will protect the home from the elements.

Timberline Solar? is made up of shingles, and not heavy tiles or panels. These shingles are strong, water-shedding, and guaranteed to be capable of withstanding winds up to 130 mph. Rack-mounted solar panel installations require the drilling of holes into the roof membrane but any damage to the roof is not usually covered by roof warranties.

Ryan Nyberg from RoofTec says, ?Homeowners in Arvada, Broomfield, Thornton and more have been deeply impressed with the brand new GAF Timberline Solar Shingles. For trendy and innovative home improvements, we encourage the Adams County neighbors to invest in solar energy systems like ours. You?ll want to switch to solar roofing because it increases property value, the GAF Energy Elite Warranty for every property is backed by an industry-leading roofing manufacturer, possible transfer of warranty, and reduction of the utility bill and environmental harm.?

It is also important to note that significant tax credits are available to homeowners who invest in solar energy improvements for the home. This solar roofing company also offers a range of services such as assistance

for insurance claims and general contracting consulting that take the standard roof replacement job to the red carpet level.

Timberline Solar? offers the world?s first nailable solar shingle, which allows roofing professionals to install the solar shingles just like a regular roof shingle, using only a nail gun. A key advantage of this roof-integrated solar system is that it is a seamless and waterproof installation that mimics the conventional shingle installation. Rack-mounted solar panels or tiles need specialized installation knowledge and skills. Installing them can puncture the current roof with lag bolts and this could severely affect the waterproofing of the roof.

The smaller form factor of the Timberline Solar? Energy Shingle (ES) compared to the regular solar panels will also permit installation on more complex roof shapes, such as hipped roofs or dormers. The ES is composed of the same high-efficiency mono PERC cell technology as those found in Tier 1 solar panels, and depending on the specific roof geometry, the ES may be able to fit more kW per roof compared to conventional solar panels.

The ES is backed by a warranty for diverse weather conditions, such as wind, rain, and snow, and it is designed to need little or no maintenance. The seasonal rains can help in keeping the solar shingles clean from dirt and debris. However, if the solar shingles will still have some dirt and grime, homeowners can gently rinse the shingles but only when they are cool .

Founded in 2017, RoofTec Precision Exteriors is a provider of solar energy solutions and roofing installation services. They are always looking for green technologies to move the industry forward. RoofTec was founded by four dedicated people to improve the consumer experience with contractors. They always strive to ensure a high quality customer service, which is why they have focused on becoming a GAF Master Elite contractor. They take pride in pointing out that only the top 2 percent of contractors in the US are chosen by GAF to be certified as a GAF Master Elite contractor.

Those who are interested in energy bill savings from a solar roof can visit the RoofTec Precision Exteriors website or contact them on the phone or through email. They are open from 8:00 am to 4:30 pm, from Monday to Friday.
