McHenry Roofing Offers Different Types of Roof Flashing Repair in Baltimore MD

March 19, 2023

BALTIMORE, MD - March 19, 2023 - PRESSADVANTAGE -

McHenry Roofing is pleased to announce that they are offering various types of roof flashing repair in Baltimore MD and neighboring areas. They offer chimney flashing repair, step flashing repair, valley flashing repair, vent pipe flashing repair, drip edge flashing repair, eave flashing repair, counter flashing repair, and roof-to-wall flashing repair. Those who require roof flashing repair can contact them to request for free estimates. They also offer other services, such as siding installation and repair, gutter installation and repair, and more.

Chimney flashing repair involves the repair of the flashing around the base of a chimney to prevent water from seeping in. Step flashing is placed where a sloped roof meets a vertical wall. Repair of step flashing requires replacement or resealing of any corroded or damaged flashing. Valley flashing is placed where two sloping roofs meet. The repair of valley flashing requires fixing or replacing any corroded or damaged flashing.

Vent flashing can be found around pipes that protrude from the roof. Repairing the vent flashing requires the replacement or resealing of any damaged or corroded flashing. Drip edge flashing can be found installed along the roof edges to prevent water from getting underneath the roofing material. Repairing drip edge flashing requires fixing or replacing any rusted or damaged flashing.

Eave flashing is installed along the roof edge to protect the fascia and soffit. Repair of eave flashing involves the repair or replacement of any corroded or damaged flashing. Counter flashing is placed on top of the chimney or wall to protect them from getting damaged by water. Repair means repairing or replacing any rusted or damaged flashing. Roof-to-wall flashing is placed where the roof meets the wall of the house. Repair involves fixing or replacement of corroded or damaged flashing.

In addition to roof repair, McHenry Roofing provides a wide range of gutter and downspout installation services. They want to emphasize that gutters are a vital part of the roof drainage system. Gutters and downspouts are designed to direct the water away from the home to prevent water accumulating on the ground near the foundation. This water can cause the soil near the foundation to become soft. It is also important for gutters and downspouts to be free from debris like leaves and twigs that can clog them and cause water to back up into the roof, which may damage the roof.

To prevent the accumulation of branches, leaves, and other debris in the gutters, gutter guards and leaf protection systems can be installed by McHenry Roofing. In addition, they can also install roof ventilation systems. They have a complete range of fascia, soffit, and gable vents to ensure the home is well-ventilated and protected from the elements. Their systems have been designed to work for any kind of tile, slate, or shingle roof material.

McHenry Roofing can provide flat roofing, pitched roofing, commercial roofing, and metal roofing. They can provide both rubber membrane flat roofing and modified bitumen torched down roofing. Modified bitumen is single-ply rolled material that has a mineral-based wear surface and it is suitable for long-term durability and weather resistance. Rubber membrane flat roofing is made of ethylene propylene diene monomer (EPDM), which is a more costly single-ply rolled material but offers excellent durability. This is installed with a cold-applied adhesive and then ballasted using coarse aggregates.

McHenry Roofing has been handling the roofing needs of various kinds of residential and commercial buildings for more than 27 years. Their roofing services include: metal roofing; pitched roofing; flat roofing; gutters and downspouts; commercial roofing; gutter guards; home insurance coverage; soffit and fascia repair; skylights and sun tunnels; and other related services. They offer their services to various areas in Baltimore, including: South Baltimore, Charles Village, Otterbein, Brewers Hill, Riverside, Pigtown, Locust Point, Fells Point, Canton, Federal Hill, Upper Fells Point, Highlandtown, Hampden, and Hollins Market.

Those who require the services of a roofing contractor in Baltimore City can visit the McHenry Roofing website or contact them through the telephone or by email. They are open from 8:00 am to 6:00 pm, from Monday to Friday.
