Tree Service Fresno Launches New Tree DNA Technology to Improve Tree Health and Preservation

March 20, 2023

March 20, 2023 -
Fresno, CA ? Tree Service Fresno, a leading tree care company in the Central Valley of California, is proud to announce that it has implemented new tree DNA technology to improve tree health and preservation. CEO Diana Burton believes this will revolutionize how trees are cared for and managed in the local area.

Tree Service Fresno has long been an advocate for tree health and protection. Their services have previously included trimming, pruning, removal, preservation, and pest control. They are taking tree care to the next level by introducing innovative DNA technology.

This new technology will allow for more precise and accurate identification of pests, diseases, and other threats to a tree's health. In addition, it will also enable them to develop more effective treatments that address any issues quickly and effectively.

CEO Diana Burton hopes this will give local trees the best chance at good health and long life in their environment. She believes that with this new technology, Tree Service Fresno can revolutionize how trees are cared for and managed in the Central Valley of California.

The introduction of Tree Service Fresno's new DNA technology is just one example of the industry-leading practices they have implemented over the years. The company also uses equipment made from recycled materials and partners with local organizations such as schools and nonprofits to provide education on proper tree care techniques. Their commitment to sustainability goes hand-in-hand with their dedication to protecting and improving the health of local trees. More information on how Tree Service Fresno improves tree health can be gleaned here: https://www.treeservicefresno.net/.

"We are always striving to be at the forefront of tree care and management," said Burton. "Our team is excited to introduce this new technology that allows us to understand better and diagnose any tree's health."

The new technology utilizes a sample of a tree's genetic material to analyze its overall health and determine any potential illnesses or diseases that could threaten it. This allows Tree Service Fresno to develop customized treatments and solutions tailored to each tree. The technology can also provide insight into the tree's growth rate and ensure that all necessary pruning and trimming are done on time.

In addition to enhancing the health of existing trees, the new technology can also help inform decisions on which trees should be planted in a certain area based on their ability to thrive in specific weather conditions and their disease susceptibility.

"This technology is essential for ensuring that every tree we work with gets the best possible care," said Burton. "We are committed to providing our clients with the highest quality service, and this technology helps us do just that."

Tree Service Fresno is dedicated to preserving and protecting trees in the Central Valley of California. With over 25 years of experience, they are the go-to experts for any tree-related services, from pruning and trimming to stump removal and planting. They are proud to offer this new tree DNA technology as part of their comprehensive suite of services.
