

Stockton Tree Experts Pioneering Innovative Use of Gene Editing to Improve Tree Resistance with Genetic Tree Care Program

March 21, 2023

March 21, 2023 - PRESSADVANTAGE -

Stockton, CA - Stockton Tree Experts, a leading tree care company based in Stockton, CA, has announced the launch of their groundbreaking new program - Genetic Tree Care?. This innovative program utilizes gene editing technology to improve the resistance of trees to drought, disease, and pests while enhancing their growth potential.

The pioneering program is the brainchild of Stockton Tree Experts' CEO Hanna Anatalia, who developed it out of a passion for helping the environment. "Our goal is to ensure trees are healthy and can withstand difficult environmental conditions," said Anatalia. "We are extremely proud to be able to offer this revolutionary new service to our customers."

Gene editing is an increasingly popular technique used in biotechnology. It involves targeting certain genes in an organism's genome and making precise changes to them to create desired traits. In the Stockton Tree Experts' Genetic Tree Care? program, the edited genes influence the tree's ability to resist disease and pests. By using this technology, Stockton Tree Experts will be able to improve the health and longevity of trees and optimize their growth potential.

"Our program is based on the idea that every tree is unique and has its own needs," said Anatalia. "Using gene editing, we can customize each tree's genetic makeup and tailor it specifically for its environment and surroundings."

The program also allows for greater precision in targeting specific areas of a tree's genome for improvement, resulting in faster and more efficient results.

In addition to gene-editing, Stockton Tree Experts will use traditional methods such as fertilization and pruning in their Genetic Tree Care? program. These techniques will be combined with gene-editing technology to create a comprehensive approach to tree care. The program is designed to help trees last longer and improve their overall health, which can help reduce the amount of time and money spent tending to them.

"We're excited to be one of the first companies in the country to offer this type of cutting-edge service," said Anatalia. ?We believe that our Genetic Tree Care? program will revolutionize how trees are cared for and make caring for them much easier. Our ultimate goal is to ensure that all trees are given the best chance to stay healthy and thrive for years to come."
