Wichita Tree Service Pros Announces Synthetic Tree Care Program

March 21, 2023

March 21, 2023 -
Wichita, KS - Wichita Tree Service Pros has announced a revolutionary new program designed to bring urban forestry into the 21st century. The Synthetic Tree Care Program is an innovative initiative that combines synthetic biology and sustainable urban forestry practices with cutting-edge technology and advanced analytics to provide best-in-class tree care services for urban communities.

The Synthetic Tree Care Program is the brainchild of Nelson Qualls, CEO of Wichita Tree Service Pros. According to Qualls, "The Synthetic Tree Care Program will revolutionize urban forestry management. By utilizing deep data analytics and leveraging the power of synthetic biology, we can now accurately identify potential issues in trees before they become serious problems while also providing better support and care to existing trees."

The Synthetic Tree Care Program begins with an initial assessment where trees are evaluated using proprietary algorithms, enabling Wichita Tree Service Pros' team of certified arborists to identify potential risks and determine what action needs to be taken. This process gives a comprehensive understanding of the health of each tree and how it impacts the overall urban forest ecosystem. From there, the team will develop a customized plan tailored to each tree's unique requirements, which includes regular preventative maintenance, fertilization, and pest control strategies. More information on how Wichita Tree Service Pros improves tree health can be gleaned here: https://www.treeserviceswichita.com/.

In addition to proactive tree care services, the Synthetic Tree Care Program offers specialized treatments such as lightning protection systems, disease mitigation methods, drought resistance techniques, and even carbon sequestration capabilities. All these treatments are powered by precision-engineered microbes designed to help trees survive in challenging environments.

"Our Synthetic Tree Care Program is designed to ensure that our urban forests remain healthy and vibrant for

years to come," said Qualls. "We can deliver unparalleled tree care services by combining cutting-edge technologies and synthetic biology with traditional arboriculture practices. Our goal is to help cities create resilient urban forests that are better able to withstand the impacts of climate change and other environmental threats."

Wichita Tree Service Pros is leading the way in urban forestry solutions. With the launch of this ambitious Synthetic Tree Care Program, the company is demonstrating its commitment to providing top-notch tree care services for communities. When cities around the world face increasing environmental challenges, initiatives like this offer a glimmer of hope for a greener future.

Wichita Tree Service Pros is one of the leading providers of professional tree care services in the United States. Founded in 2002 by Nelson Qualls, the company has established itself as a leader in the industry, offering a wide range of services, including pruning, cabling, stump removal, storm damage repair, and much more.

Wichita Tree Service Pros' base of operation is located at 7227 W Harry St, Wichita, KS 67209, United States. The company, however, can be contacted at 316-799-3555 and sales@treeserviceswichita.com.
