

Fort Worth Tree Services Launches Green Infrastructure Tree Care Program

March 22, 2023

March 22, 2023 - PRESSADVANTAGE -

Fort Worth, TX - Fort Worth Tree Services, the leading provider of urban tree care services in the Greater Fort Worth Area, is proud to announce its new Green Infrastructure Tree Care Program. The program is designed to provide innovative solutions to help restore and maintain urban forests using green infrastructure techniques. This initiative is part of Fort Worth Tree Services' commitment to providing safe and sustainable tree care solutions.

"At Fort Worth Tree Services, we've always been committed to providing the highest quality tree care services that are both safe and sustainable," said Maranly Larabiosa, CEO of Fort Worth Tree Services. "Our new Green Infrastructure Tree Care Program is a great example of how we use our expertise in urban forestry to create innovative solutions that can help preserve and restore urban forests."

The Green Infrastructure Tree Care Program will utilize traditional and green infrastructure techniques to improve urban forests' health, vitality, and sustainability. Traditional methods such as soil enhancement and irrigation will be combined with green infrastructure techniques that use natural resources such as rainwater harvesting and native vegetation. These techniques will help reduce water runoff and enhance soil fertility, resulting in healthier trees that require less maintenance.

In addition to providing healthier trees, the Green Infrastructure Tree Care Program will also focus on creating an aesthetically pleasing environment for local communities. Innovative strategies such as selective pruning and planting of native species will be used to create vibrant landscape designs that provide both beauty and utility.

"We believe that green infrastructure is the key to restoring our urban forests," said Larabiosa. "By combining traditional tree care methods with green infrastructure techniques, we can create vibrant landscapes that are both attractive and functional. This is especially important in areas with limited clean water or fertile soil access."

Fort Worth Tree Services is working in collaboration with local organizations and individuals to ensure the success of its Green Infrastructure Tree Care Program. The company has partnered with Keep Fort Worth Beautiful and Texas A&M AgriLife Research to research and develop best practices for implementing green infrastructure solutions in Fort Worth's urban forests.

"We're excited to be working with these organizations to promote the benefits of green infrastructure in our city," said Larabiosa. "We believe this program will benefit our urban environment and help cultivate the next generation of sustainable tree care professionals."

Fort Worth Tree Services is dedicated to providing its customers with the highest quality tree care services while preserving the integrity of our urban forest. The family-owned business specializes in professional tree care services for residential, commercial, and municipal clients.
