Tersigni Vision Explains How to Ensure One Is in Good Hands with the Best Eye Surgeon in Portland

April 04, 2023

Lake Oswego, OR - April 04, 2023 -
Tersigni Vision, a leading vision correction center in Lake Oswego, OR, has recently published an article titled, ?Eye Surgeon Portland: How to Know You Are in Good Hands with a Refractive Surgery Ophthalmologist.?

Since one?s vision is priceless, it is essential to note the training, qualifications, and relevant experience of the refractive surgeon.

Dr. Tersigni says, ?There are important questions to consider when determining what sets some refractive surgeons apart from others. Clearer vision can be life-changing, and the good news is that it is attainable! We have more options, give clear answers, and will take care of you every step of the way at Tersigni Vision. Visit our office to see for yourself the Tersigni Vision difference.?

One vital question to consider is the level of education that is required to be an ophthalmologist who can perform refractive surgery. An ophthalmologist is someone who has completed four years of medical school after completing four years of pre-med undergraduate school. After finishing one year of internship and three

or more years of specialized medical and surgical training as a resident, the prospective ophthalmologist would have gained extensive knowledge about eye health, eye disease medications, eye conditions, and vision care treatments. LASIK specialists will usually complete a fellowship in corneal and refractive surgery before they start working in this extremely specialized field.

Another good question to ask is the importance that refractive surgeons place on continuing education. A vision correction specialist needs to be updated on the latest technologies and treatments. A good refractive surgeon, like Dr. Tersigni, considers continuing education to be of great importance.

It is also important to know if the refractive surgeon is able to perform more than just LASIK for vision correction and be able to provide a recommendation on what would be the most appropriate vision correction procedure for the patient?s specific needs, rather than forcing the patient into a LASIK procedure.

Additionally, certain ophthalmologists who perform refractive surgery also participate in FDA clinical studies. These eye surgeons are very much respected and trusted by manufacturers of laser equipment for eye surgery, as well as ophthalmic products, pharmaceuticals, and devices. These manufacturing companies typically choose eye surgeons who are highly experienced and knowledgeable in the methods used in FDA research, including the strict examination and follow-up requirements of the FDA.

It is also advisable to make sure that the LASIK surgeon has access to cutting-edge technology for refractive surgery and pre-operative exams. The data provided at the initial eye exams will be used by the eye doctor to decide whether a particular patient is a good candidate for refractive surgery.

Established in 2022 by Dr. Steven Tersigni, Tersigni Vision has the mission of making available world-class care for vision correction that can significantly improve the lives of people in Oregon and the Portland area.
