

Spray Foam Insulation Contractor in Colorado Springs Earns Five Star Review

April 03, 2023

April 03, 2023 - PRESSADVANTAGE -

iFOAM Insulation, based in Colorado Springs, CO, is happy to announce they have earned another five star review from a satisfied client. They offer spray foam insulation installation in Colorado Springs and surrounding areas. Colorado Springs is a home rule municipality that serves as the county seat of El Paso County. Spray foam insulation offers the advantage of air infiltration and significant energy savings due to an increase in energy efficiency of as high as 30 percent. Spray foam has the highest R-value and efficiency compared to other insulation products.

In the above-mentioned review, Larry C. said, "If you're looking for good insulation and great people to work with, the folks at iFoam in Colorado Springs are who you need to call. Their no BS, courteous service is refreshing. They do what they say, and they do it when they say they will. It is a rare trait in most service companies but very appreciated! Thank you to the folks at iFoam for a great product but even more so for maintaining integrity and customer service in what you do."

Aside from spray foam insulation services, they also offer blown-in insulation, residential attic retrofit, residential crawlspace retrofit, new residential construction insulation, insulation removal, air sealing, and

more. It is also important to note that their spray foam insulation specialists are certified and can handle both open-cell and closed-cell foam insulation. This type of insulation that is applied in liquid form, after which it will expand into a foam.

The expert technicians from iFOAM Insulation employ a holistic and thorough method at each step of the installation process. The first step will take is to evaluate the specific needs of the client's home to make sure that the insulation they will be providing is truly suitable for the specific home and the needs of the family. The second step in the process is to conduct a home energy audit. They will apply their knowledge and experience and their cutting edge assessment technology in order to provide a complete and custom-tailored energy audit of the home to find out if there are any energy inefficiencies, air leaks, etc. In the third step, they will discuss the results of the home energy audit with the homeowner.

In the fourth step, the iFOAM technicians will submit a proposal to the homeowner on their recommendations for improving the energy efficiency and insulation of the home. They will offer a number options for improving the comfort level and energy efficiency of the home. Included in the proposal are several financing options to make the project easier on the budget of the homeowner. Once the client has approved the proposal and made a choice from the offered alternatives, they will schedule the installation based on the schedule of the homeowner. And the final step, of course, is to do the spray foam insulation installation.

They also offer blown-in insulation, which has to be installed using special equipment. The technicians also have special training to be able to install blown-in insulation. This type of insulation is often used for attics and complex-shaped spaces in the home. They can also provide services for a residential attic retrofit. The attic is an important space in the home that requires insulation because this will offer the benefit of preventing air from leaking from the home or the external air from getting inside. This may help provide significant savings through a reduction of the heating and cooling costs, which typically make up 50 to 70 percent of the energy used in the average home. This means that air leaking through the attic represents a significant energy waste.

Another part of the home that may benefit from better insulation is the crawlspace. Drafty crawlspaces also represent waste in energy. Using spray foam technology, they can make sure that the home is provided with an air-tight seal.

Those who are looking for a spray foam insulation contractor in Colorado Springs Colorado can check out the iFoam Insulation website or contact them on the phone. They are open from 9:00 am to 6:00 pm, from Monday to Saturday.
