

Spray Foam Insulation Contractor in Columbia South Carolina Helps Homeowners Save on Energy

April 04, 2023

April 04, 2023 - PRESSADVANTAGE -

iFOAM Insulation in Columbia, SC, wants to point out that the spray foam insulation they provide can boost the energy efficiency of a home by as much as 30 percent because of its ability to provide an air-tight seal and prevent heat transfer and air infiltration. This doesn't only mean energy savings but also the prevention of seasonal allergies, less mold, and better indoor air quality.

A spokesperson for the spray foam insulation contractor says, "It is important to note, however, that the efficacy of your insulation is largely dependent on the capabilities of the installers. Making mistakes during installation can reduce the benefits you receive, which is why it's always best to hire a professional. Our team of experienced professionals are dedicated to providing top-quality spray foam installation services that will meet your needs and budget. We've been in the business for 10 years and have been fortunate to provide insulation services to a number of satisfied clients throughout the Columbia South Carolina area. We've worked on several different types of properties including residential, commercial and industrial spaces."

Spray foam insulation is a kind of insulation that is in liquid form when it is applied to the space where it is to

be installed. After a while it will expand and turn into a foam. It is usually applied for residential and commercial buildings because it offers the advantage of providing an airtight seal, prevent the infiltration of air and heat transfer that wastes energy. They can provide a residential retrofit service to to improve the insulation of a home and prevent air infiltration. Meanwhile, for those whose home insulation has been damaged, iFoam technicians can also offer insulation removal services.

The expert technicians at iFOAM Insulation always take a holistic and thorough approach at every step of the spray foam installation process. The first step they will take is to assess the insulation requirements of the client's home to ensure that the insulation they will be providing is appropriate for the home and the family. The second step is to perform a home energy audit. They will use their knowledge and experience and their advanced assessment technology to offer a full and tailor-fitted energy audit of the home to check if there are any energy inefficiencies, air leaks, etc.

In the third step, they will talk to the homeowner about the results of the home energy audit. In the fourth step, the iFOAM technicians will present a proposal to the homeowner that states their recommendations to improve the insulation and energy efficiency of the home. They will provide several alternatives for boosting the comfort level and energy efficiency of the home. Included in the proposal are several financing options to make the project easier on the budget of the homeowner. Once the client has agreed to the proposal, having selected from the different options, they will schedule the installation. And the last step, of course, is for iFOAM to install the spray foam insulation.

In addition to spray foam insulation services, they also provide blown-in insulation, residential crawlspace retrofit, new residential construction insulation, residential attic retrofit, air sealing, insulation removal, and more. The spray foam insulation specialists at iFOAM are all certified and are capable of installing both open-cell and closed-cell foam insulation.

They will install blown-in insulation using special equipment. This kind of insulation is typically used for attics and complex-shaped spaces in the home that are hard to reach. The attic is an important space in the home that needs insulation because this will prevent air outside from getting in and the air inside from getting out. This can result into substantial savings of up to 50 to 70 percent of the heating and cooling expenses. This is because the air that leaks through the attic represents a huge energy waste.

Those who are interested in the services of a spray foam insulation contractor in Columbia South Carolina can visit the iFoam Insulation website or contact them on the telephone. They are open from 9:00 am to 6:00 pm, from Monday to Saturday.
