

Illuminex Lighting Reveals Philosophy Behind Their New Range Of Commercial LED Bulbs

March 31, 2015

March 31, 2015 - PRESSADVANTAGE -

Illuminex Lighting has announced a new range of commercial LED bulbs. They are keen to let their customers know that their products are not just of high quality, but that there is an entire company philosophy behind it as well. This is one of the many things that sets their company apart.

"We believe lighting is there for more than just providing light," explains Dennis Gronbeck, spokesperson for Illuminex Lighting. "Indeed, we see how lights can actually influence all aspects of society and the world as a whole."

To achieve this, the company has focused on firstly supporting the national economy. Those who click here to get a free quote will immediately see the option for products made right here in this country. Additionally, Illuminex Lighting has gone through years of research and testing to make sure all the manufacturers of their products, whether OEM or private label, meet all the necessary quality and safety standards, while remaining affordable at the same time. The second thing anyone will uncover is that Illuminex Lighting has a strong focus on green energy and sustainability. This is also strongly seen in their commercial LED bulbs.

"LED - light emitting diodes - are a very environmentally friendly type of bulb," explains Sarah Richardson, Environmental Consultant. "This is firstly due to their efficiency: almost 90% of the energy they consume is actually turned into light, rather than in heating the bulb as we see in traditional incandescent bulbs. Secondly, they last a lot longer before needing to be replaced, which also has a strong environmental impact."

For Illuminex Lighting, this is just another element of how they intent to make the world a brighter place. Because their focus is strongly on the commercial sector, the fact that these bulbs save a lot of money both in terms of energy usage and in terms of frequency of replacement, is just an added bonus. Being eco-friendly and focusing on sustainability and lowering a carbon footprint is a huge part of the overall vision and philosophy of the company.

To date, Illuminex Lighting has worked together with a variety of different companies across the country. They have used a number of these clients as case studies to demonstrate how efficient their lighting products are. Some of these include the Maui Nix retail store lighting project, the Breckenridge street lighting project, the Accelerated Schools project in Denver, CO, and the University of Denver. This is just a small selection of the organizations, institutions and companies that have successfully achieved energy efficiency and lighting by working together with Illuminex.

Please visit <http://www.illuminexlighting.com/> for further information on these commercial LED bulbs, or use the contact details below. Quotations are completely free and with no obligation. Illuminex Lighting will be happy to demonstrate just how easy it is to brighten up the world in a way that is high quality, good for the environment and completely affordable.
