

My Implant Dentist Explains the Differences between Dental Implants & Crowns

April 26, 2023

April 26, 2023 -
My Implant Dentist, a leading dental clinic in Perth, is educating patients on the differences between dental implants and crowns. Many people are unaware of the distinction between these two dental restoration methods, which can make it difficult for them to decide which one is right for them.

"Dental implants and crowns are both effective treatments for restoring teeth, but they serve different purposes," says Dr Kent Tan, Principle of My Implant Dentist. "Dental implants are a long-term solution for replacing missing teeth, while crowns are used to repair and protect damaged teeth."

Dental implants are titanium posts that are surgically placed into the jawbone to replace the root of a missing tooth. Once the implant fuses with the bone, a new artificial tooth or crown is attached to it. Dental implants offer several benefits, including improved oral health, enhanced appearance, improved speech, enhanced comfort, and durability.

Crowns, on the other hand, are dental restorations that cover the visible portion of a damaged tooth to improve its appearance, strength, and functionality. They are recommended for restoring damaged teeth that

still have enough remaining tooth structure to hold the filling in place and allow the tooth to function properly. Crowns help to restore the form, functionality capabilities, and aesthetics of the tooth, improve its strength, protect the underlying tooth, keep a dental bridge in place, and cover the top part of a dental implant.

"It is essential to understand the differences between dental implants and crowns (Dental Implants vs Crowns) before deciding which treatment is right," adds Dr Kent Tan. "At My Implant Dentist, the team takes the time to explain the options available to patients and help them make an informed decision that meets their unique needs."

As a leading dental clinic, My Implant Dentist is dedicated to providing patients with the highest level of care and treatment. The clinic uses the latest technology and techniques, such as 3D imaging and CAD/CAM software, to ensure precise and efficient dental procedures.

"At My Implant Dentist, team members are committed to helping patients achieve optimal oral health and a confident, beautiful smile," says Dr Kent Tan. "My Implant Dentist understands that visiting the dentist can be a daunting experience for some, which is why the team strives to create a warm and welcoming environment for all patients."

Looking towards the future, Dr Kent Tan is excited about the potential for dental technology to revolutionise the way dentistry is practised. "Advancements in technology are opening up new possibilities for dental treatments that are more efficient, accurate, and comfortable for patients," Dr Kent Tan says. "At My Implant Dentist, team members always stay up-to-date with the latest developments in the field to provide the patients with the best possible care."

To schedule an appointment with My Implant Dentist and to know more about how long do dental implants last, contact (08) 9361 5544 or visit the clinic's website.
