

## **Signmaster Systems Offers Eco-Solvent Printers, such as Roland Printers and Mimaki Printers**

*May 16, 2023*

May 16, 2023 - PRESSADVANTAGE -

Signmaster Systems, a company based in Whitchurch, UK, offers eco-solvent printers, such as Mimaki printers and Roland printers. These printers use eco-solvent inks, which offer the major benefit of being environmentally friendly. These inks also have a quicker drying time and a wider variety of colors. They also have enhanced ink fixation that provides better chemical resistance and scratch resistance. These inks also have a more sophisticated media compatibility and higher print speed, which allows for the smoother functioning of the printer. Eco-solvent inks also allow printing on a range of lower cost PVC with standard paper backing.

A spokesperson for Signmaster Systems says, "The Roland VG3 is Roland's newest and greatest solvent roll-to-roll printer. With Roland's exceptional build quality in a brand-new purpose-designed chassis, it's a striking but functional addition to your print room. The TrueVis 2 inks TR2 are the latest version of Roland's solvent-based inks with a reduced gas-off time of 6 hours allowing you to produce great quality vibrant prints with a much quicker finishing time reducing that valuable production time."

The colour options available for the TrueVis 2 inks TR2 include white, orange, green, and it provides an advantage over other similar printers because it can provide vibrant colours for the prints. This is especially true when utilizing the new True Rich colour options in Versaworks. The prints look so bright they seem to have been printed using neon inks. In addition, the quick-release media handles on the front and rear media holders of the printer enable convenient loading of rolls especially when the user is holding a 50m roll while trying to look for that thumbscrew.

The Roland VG3 has a new full touchscreen control panel that allows for easy navigation of the menus. Setting up a new media type is also easy with its new auto media setup feature, which can do everything automatically. Calibrations can also be easily done because the VG3 will perform automatically all the feed/media gap calibrations.

As for Mimaki, one of their latest eco-solvent printers is the JV300-160 Plus, which has a maximum print width of 1,610 mm. The next generation print and cut solutions offered by Mimaki offer faster speeds and higher quality results, while retaining their highly efficient and seamless workflow. The new Plus Series printers from Mimaki, including cutters and integrated printer/cutters provide a cutting edge system that takes advantage of the latest technology to offer sustainable options that also enhance productivity.

Another Mimaki eco-solvent printer option is the JV100-160, which offers new features that enable easier set up and operation, while providing high print quality, reliability, and production speeds as high as 62.9 sqm p/h.

Signmaster Systems, which is based in Whitchurch, Shropshire, UK, has been trading for more than 20 years and as a result has developed a customer base composed of loyal and supportive customers. They are focused on solutions for customers' wide format printing requirements. From buying new hardware and finishing machines to stocking up on various kinds of inks and media, they pride themselves on always exceeding customer expectations, which is what their long standing customers have praised many times.

They have an overall rating of 4.8 out of 5 stars on Feefo after receiving almost 250 customer reviews. In one recent review, HFE Signs gave them five stars and said, "Always very happy with the team at Signmaster - we've used them for many years and have 100% confidence in them in all aspects, keep up the good work guys." In another review, a customer also gave them five stars and said, "Damien was extremely helpful from initial enquiry to making the purchase and ensuring a smooth delivery and install! Always used Signmaster for media and ink and the process of buying a machine from them was just as easy."

Those who want to get more information about the printers and accessories, such as the Signmaster Systems flux desktop laser cutters, can check out their website or contact them on the phone or through email.
