

**WHY WORK WITH SUNSTATE POWER SOLAR SOLUTIONS?**

When it comes to comparing solar companies in Tucson and selecting a residential solar

# Tucson Solar Energy Contractor Sunstate Power Solar Solutions Launches New Website

*May 16, 2023*

May 16, 2023 - PRESSADVANTAGE -

Sunstate Power Solar Solutions, a residential solar energy and solar panels contractor in Tucson, AZ, has announced the launch of its new website.

With nearly 350 days of sunshine every year, Tucson homeowners are primed to make the most of modern solar energy production equipment and Sunstate Power Solar Solutions offers everything that they need to make it happen. The company's range of solar power services includes solar system design, solar panel installation, and energy storage solutions, all at a competitive price and offered by a team that has over a decade of experience in the industry.

Sunstate Power Solar Solutions' new website provides visitors with a detailed overview of the company's services, offers several resources to help them understand the latest solar technologies, and contains relevant information on the two brothers running the locally owned and operated company, Brent Young and Trevor Young. Website visitors can also browse through the several testimonials that the company has

received over the years from local customers.

"Our expert team can craft solar energy solutions that are custom designed to meet your home's unique energy consumption needs," says Brent. "We also take into account your home's architectural design, surrounding structures and landscape, and budget. The result is a tailored home solar solution that works optimally to help you achieve your clean energy goals. To find out more, visit our new website where you can also fill out a contact form to get started with a free no-obligation quote."

The company's solar panel installation services use the latest industry-standard techniques to ensure peak performance as well as equipment longevity. Homeowners can rely on Sunstate Power Solar Solutions to deliver a home solar panel installation in Tucson that offers a significant return on investment by cutting their monthly payments to TEP (Tucson Electric Power).

"The city of Tucson provides a tax credit to homeowners who choose to install solar panels on their property," says Trevor. "To qualify for the \$2000 credit, the system must be installed by a licensed contractor and meet certain technical requirements. Here at Sunstate Power Solar Solutions, we have the requisite licenses and experience to help you secure that credit and get a significant discount on getting your home ready for a greener future."

Tucson homeowners have a choice between three types of solar panels for their residential property. Monocrystalline panels are highly efficient, take up relatively less space, and offer better performance in low-light conditions. However, they are generally more expensive. Polycrystalline panels have a slightly lower efficiency but come in at a much more affordable price point. Finally, thin-film photovoltaic panels, which have even lower efficiency, can be integrated into surfaces such as windows and building facades and are preferred in projects where conventional solar panel systems cannot be used.

Sunstate Power Solar Solutions can also help customers pick the right solar battery backup system for their home by taking into consideration the amount of energy the homeowner needs, the size and type of battery, compatibility with the current solar panel system, and any other features that may be important for the homeowner. The company can help install one of the top systems in the market available today - Enphase IQ.

Residents in Tucson have repeatedly praised Sunstate Power Solar Solutions for the professionalism of its crew members and exemplary customer service. On its Google Business Profile, where it has a perfect 5-star overall rating, a recent customer testimonial says, "We had an excellent experience with Sunstate Power and Solar. The owners, Brent and Trevor, were very professional, knowledgeable, and friendly. They were patient and answered all our questions...They were informative without being pushy, which we greatly appreciated. We look forward to working with Sunstate Power and Solar in the future."

Readers in Tucson can contact Sunstate Power Solar Solutions at (520) 940-3480 or [contact@sunstatepowersolar.com](mailto:contact@sunstatepowersolar.com) to inquire about its services.
