

## **Exaprotect Launches Security Management Products And Services For Enterprises**

*December 10, 2015*

December 10, 2015 - PRESSADVANTAGE -

Exaprotect, a business in Mountain View, CA, has launched their new security management products and services for enterprises. Their goal is to centrally design, approve, and deploy network security policies and to centrally collect, analyze and store security information and event logs. Full details are available on the company's website on <http://www.exaprotect.com/>.

"Security management is something that needs to be both viewed and done," says Robert Christian from Exaproject. "We focus on those two specific elements for our clients so that they can both demonstrate and enforce regulatory compliance. We have won numerous awards for our work, which is a testament to the quality of what we do."

The company works on centralized configuration change management, event monitoring, log management and correlation solutions. This work is provided to service providers and enterprises that have large, heterogeneous network infrastructures.

Their technology is patented and patent pending. It allows them to uniquely and automatically establish any

links between specific networking configurations and business policies. In so doing, they are able to directly meet any requirements for compliance, as well as, perhaps most importantly, remediate any threats to security.

The products that the company offers and the work that they do have been incredibly well-received by their many clients. "Thanks to the Exaprotect products, the operational efficiency of my security and network teams was greatly improved," says one customer. "They helped with every element of the systems, including implementation, design, auditing and monitoring. My entire network configuration and infrastructure are now as secure as they possibly can, and I feel empowered by the fact that I am fully involved in this."

Exaprotect encourages everybody to visit their website to see the work that can be done for them. They have a comprehensive flash demo included in their website, which gives greater clarity about their work. Additionally, people can download a free trial, so that they can get to grips with the product that are on offer and how they can benefit them. The company has already been able to work with some very notable global clients, which is further testament to the quality of their products and services.
