

Electrodry Introduces Non-Toxic and Odourless Floor Sanding Coatings in Brisbane

June 08, 2023

June 08, 2023 - PRESSADVANTAGE -

Electrodry Floor Sanding Brisbane, a leading provider of timber floor restoration services, is proud to announce the introduction of non-toxic and odourless floor sanding coatings. This revolutionary solution addresses the common concerns of fading, bleaching, and darkening in wood, bamboo, and timber floors caused by sun exposure. This revolutionary solution showcases Electrodry's commitment to innovation and customer satisfaction.

Grant Burchell, the Marketing Manager of Electrodry Floor Sanding Brisbane, emphasised the importance of protecting hardwood floors from the damaging effects of UV light, visible light, and infrared light. He stated, "Fading, bleaching, and darkening in wood, bamboo, or timber floors due to sun exposure is a complex issue. The primary culprit behind colour deterioration is UV light, which has a significant impact on the actual wood. At Electrodry, the team understands the challenges faced by homeowners in maintaining the beauty and longevity of their floors."

To combat the detrimental effects of sun exposure, Electrodry Floor Sanding Brisbane offers a comprehensive range of services including budget floor sanding - floor-sanding.com.au/brisbane/, floor polishing, and floor refinishing. These services are carried out by a team of highly-qualified professionals certified by the Australian Timber Flooring Association, ensuring the highest standards of quality and craftsmanship. By leveraging their expertise and utilising state-of-the-art equipment, Electrodry ensures that the restoration process is executed efficiently and effectively.

One of the key differentiators of Electrodry's floor sanding process is the introduction of non-toxic and odourless coatings. These coatings have been thoroughly tested and proven within the industry. By implementing these environmentally friendly products, Electrodry provides a safe and secure solution for homeowners concerned about the health and well-being of their families and pets. The combination of industry-tested coatings and high-quality sander equipment guarantees outstanding results.

Unlike common drum floor sanders that create sparks and shoot particles, Electrodry's weighted rotary sander eliminates the risk of accidents. "The sander is designed to prioritise safety," Grant Burchell affirmed. "The team understands the importance of protecting both clients and their property during the floor sanding process. The advanced equipment ensures a risk-free experience for everyone involved."

In addition to its commitment to safety, Electrodry Floor Sanding Brisbane maintains a focus on affordability. By keeping costs low and passing the savings on to the residents of Brisbane and Queensland, the company aims to make timber floor restoration accessible to all. Grant Burchell stated, "The team believes that everyone deserves to enjoy the beauty of their hardwood floors without breaking the bank. The cost-effective solutions provide exceptional value without compromising on quality."

Looking ahead, Electrodry Floor Sanding Brisbane remains dedicated to innovation and customer satisfaction. Grant Burchell concluded with an optimistic outlook, saying, "As technology advances and new developments emerge in the industry, Electrodry will continue to stay at the forefront. Team members are committed to enhancing the services and introducing cutting-edge solutions that meet the evolving needs of the customers. The goal is to exceed expectations and ensure that every floor the team restores becomes a testament to their expertise and dedication."
