

Nanotise Offers Mould Removal Service In Sydney

June 21, 2023

June 21, 2023 - PRESSADVANTAGE -

Wahroonga, NSW based Nanotise is offering their services to Sydney residents and businesses that need to get rid of mould. The company offers free mould inspections followed by the thorough removal of all mould. Steps are also taken to ensure the mould does not grow back. The company has been active in the industry for over 15 years, and now their highly effective, affordable solutions are available in Sydney.

The removal of mould is a matter of home safety. Depending on the type of mould in question, those exposed within a home or other building can find themselves dealing with serious health issues, especially if the exposure takes place over an extended period. Sickness, permanent organ damage and even death may occur when an individual is exposed to mould, and this is why it is important to have it removed as soon as it is discovered.

Unfortunately, mould can be very difficult to get rid of. It tends to grow in damp, warm spaces, which in turn tend to be hard to reach and easy to overlook. As such, an untrained individual might not think to inspect these nooks and crannies for an infestation. Even if they do manage to take care of all the visible mould in their house, they will find that mould is prone to growing back unless certain steps are taken to stop this from happening.

With Nanotise's home mould remediation services, homeowners can rest assured that they are rid of their mould problems for good. Using nanotechnology, Nanotise provides long-lasting mould treatment and protection. All the methods used by the company are tried-and-tested, with results that are immediately observable.

The company follows a four-step mould removal program. The first step is gassing. Chlorine dioxide, which kills mould, is pumped into the home. This fills out all cavities, including the hard-to-reach locations. The gas is harmless to humans and leaves no residual toxicity behind. Gassing is not always necessary, but it can be used to prepare a home for more intensive mould treatment in cases where the infestation has flourished to an extreme degree.

The next step is a thorough hand cleaning that is meant to remove the mould from every surface in the house. Nanotise uses a proprietary antimicrobial, antifungal solution to disinfect and sanitise all surfaces around a client's home. This also prepares the surfaces for CRX antifungal bonding, which is the next step of Nanotise's process. Using an advanced Australian-made product called CRX, Nanotise ensures that every surface in a client's home is protected against future mould growth. Like the gas used in step one, CRX is nontoxic and eco-friendly (both before and after application).

Once the house is free of mould, Nanotise tests the house once more and provides a certificate showing that the home has been treated, tested and is now mould-free. They also provide ATP swab testing, tape-lift and RODAC sampling if necessary.

"Mark, Alex and Cam were fantastic and really helpful," says a review of the company's mould removal services. "From the start when they inspected our home to treating our issues, they were professional and caring. Mark really tried to understand our issues and was able to fit me in urgently to help resolve our mould situation, especially as we have three young children. Communication was easy and all work was done within a week of our initial consultation. The work was well done, and the team remain available should any issues arise in the future. I enjoyed entering our mould-free home and finally felt like I could breathe and was much less stressed. Thank you, all!"

Nanotise is an Australian family owned-and-operated business that has offered a number of pest and sanitisation services for years. They are committed to protecting the workforce, family and customers of each and every one of their clients.

For safe sanitising, infection control and mould remediation solutions in Sydney, interested parties may contact Nanotise. The company is committed to helping its clients keep their spaces sanitary and free of mould at all times. More information is available on the company's website and social media platforms.
