Dumpster Software by Dumpster Rental Systems Revolutionizes the Waste Haulers Industry

June 20, 2023

Cedar Park, Texas - June 20, 2023 -
Dumpster Rental Systems (DRS), a leading provider of comprehensive software solutions for the waste management industry, has announced the launch of its innovative dumpster software designed to streamline operations and increase profitability for businesses in the dumpster rental sector.

DRS's all-in-one solution offers true online booking, inventory management, tracking, routing, and more, all under one roof. The software is designed to automate every aspect of a dumpster rental business, from online booking and customer surveys to comprehensive tracking and management.

"DRS dumpster software is a game-changer for the dumpster rental industry," said Jeremy Thrailkill, Vice President of Dumpster Rental Systems. "Our platform is designed to increase productivity, sales, and revenue while decreasing costs, stress, and wasted time. It's about putting your dumpster business on autopilot and letting our software do the heavy lifting."

The software is accessible from virtually anywhere, thanks to the DRS dumpster apps. This means businesses can take orders, track containers, and manage their crew from the palm of their hand, wherever they are. The software allows businesses to operate 24/7 without any extra manpower or resources, with customers able to access the site at any time for no extra charge.

DRS's software includes an Administrator App and a Driver App. The Administrator App allows businesses to control every aspect of their dumpster rental operations, from order taking to box tracking. The Driver App, on the other hand, enables drivers to manage orders and customers on the go, accept payment, enter a tonnage charge, communicate with the customer, and route to their destination, all from their smartphone.

In addition to these features, DRS offers a true online booking system, a comprehensive customer relationship manager, box tracking capabilities, and a robust reporting system with over 200 reports and

filters. The software also includes invoicing features that allow clients to pay individual or multiple invoices at the same time.

"DRS Dumpster software is a true all-in-one solution and the first and only roll-off software that offers true online booking with box tracker management," Thrailkill added. "We're proud to say we're the fastest-growing waste management software solution in the country, and we've achieved this by providing waste haulers with the tools they need both inside and outside the box."

Building on its commitment to innovation, Dumpster Rental Systems has also integrated a range of additional features into its software to further enhance the user experience and operational efficiency. These include net billing, custom hidden pricing, custom tonnage by customer, and a robust knowledge base for user support.

The software also offers an open API for seamless integration with other systems, WordPress integration for website management, and QuickBooks integration for streamlined accounting. These integrations allow businesses to consolidate their operations and manage them from a single platform, saving time and reducing the risk of errors.

"Beyond the core features, we've also focused on providing a range of additional tools that businesses in the dumpster rental industry will find invaluable," said Thrailkill. "From custom pricing options to seamless integrations with other key systems, we've thought of everything to make running a dumpster rental business as smooth and efficient as possible."

Moreover, DRS has also incorporated a range of marketing tools into its software. These include email marketing capabilities, Google review requests, and the ability to send survey emails to customers. These features enable businesses to engage with their customers more effectively, gather valuable feedback, and build a strong online reputation.

In terms of reporting, the software offers a comprehensive suite of reports, including ROI breakdown, inventory usage, sales reports, and employee reports. These reports provide businesses with valuable insights into their operations, helping them make data-driven decisions to optimize their performance and profitability.

"DRS is not just about automating operations; it's also about providing businesses with the insights they need to grow and succeed," Thrailkill added. "Our reporting features are designed to give businesses a clear picture of their performance, helping them identify areas for improvement and make informed decisions."

According to the company website, Dumpster Rental Systems is not just providing a software solution; it's offering a comprehensive platform that empowers businesses in the dumpster rental industry to streamline their operations, engage with their customers more effectively, and make data-driven decisions to drive their growth and success.
