

Residential & Commercial Insulation Services Available At North Houston Contractor

July 07, 2023

July 07, 2023 - PRESSADVANTAGE -

Spring, TX based iFoam of North Houston is ready to upgrade the insulation of any home or business in the area. The company is able to perform a residential retrofit, remove old insulation, perform air sealing, add blown in insulation and more in addition to installing their famous spray foam solution. See more here: Visit [Company Website](#).

The company says it is important for customers to understand what spray foam is and what it stands to offer them before signing up for an installation. While spray foam is widely recognized throughout the industry for its numerous advantages, they say, the truth is that a property's existing insulation may already be sufficient for its needs. In such cases, spray foam may not be recommended (unless the property owner wishes to modernize their installation).

Spray foam insulation, like all forms of insulation, is an investment in your home and comfort. If your current installation already offers a comparative benefit, you may wish to hold off on introducing spray foam insulation to your home for some time. Of course, should the opposite be true, or should you wish to go ahead for any other reason, we will be more than happy to extract your old insulation

for you before installing the spray foam replacement.?

When iFoam visits a property, the team begins by performing an energy audit. This audit is comprehensive, measuring air infiltration, heat transfer and a number of other factors to determine how energy efficient the structure may be. The team may also take a look at the property's past utility bills and compare them with current usage to form an accurate picture of the structure's performance over a certain period. Learn more about this here: [Visit Web Site](#).

There are several reasons why spray foam is considered the solution of choice for local residents and businesses. During installation, the substance is sprayed into place as a liquid, following which it expands into a foam that fills every nook and cranny it can reach. This property enables it to get into regions other forms of insulation cannot, making it much more effective when properly installed. The foam creates a tight seal with the surfaces it touches, and this can cut down severely on air infiltration as well as heat transfer.

However, the way spray foam is deployed may make it unsuitable for certain areas of a home or business. This is why iFoam offers a variety of services, each of which is designed to address a specific need. Should it not be possible to install spray foam insulation in a small area of any structure, the company may instead turn to caulk, weather stripping and so on to make up the deficit. Whatever challenges they may come across, the team will not rest until a job is done ? and done right.

With several offices in Texas, the company has helped numerous customers improve the energy efficiency of their property. ?iFoam provided excellent spray foam insulation in the building under our house on stilts,? shares one customer in Dickinson. ?Other spray foam contractors left us dissatisfied at best. After calling iFoam, we now realize we hit the spray foam jackpot! The very next day, a gorgeous, huge, spotless pink truck showed up, with a crew that was super personable. They even gave me a tour of the truck!?

The review continues, ?The whole building was beautifully insulated, the area was cleaned up spotless in a matter of a few hours. But wait! Besides the pretty truck, this company's customer service is top notch. After spraying on Friday, they showed up on Monday to make sure we were satisfied. We recommend them 100%. We love Foamy, the foam gnome, and will be hiring this fabulous company again soon!?

The company invites residential and commercial customers to contact their office today if they wish to schedule an inspection or learn more about the properties of spray foam insulation. More information can also be found on the official iFoam of North Houston website.
