

Safe Laser Therapy LLC Is Offering Hair Restoration Treatments In New York And Connecticut

March 11, 2024

March 11, 2024 -
Safe Laser Therapy LLC, an eco-friendly wellness clinic in Stamford, CT, is offering clients state-of-the-art laser therapy for hair restoration.

The root causes of hair loss can be everything from aging and thinning hair to recovery from chemotherapy, autoimmune diseases, menopause, scalp conditions, stress, or vitamin deficiencies. Genetics, diet, medications, and hormonal changes can also affect the scalp and encourage hair loss. While hair loss can be caused by a number of factors and could be distressing for an individual, there is still hope as not all hair loss is permanent. Moreover, with the right treatment, hair can even grow back, fuller and thicker than before.

Low-Level Laser Therapy (LLLT) is one of the newest technologies that shows promise as a method to promote hair growth. The treatment does not involve fake surgical implants, chemicals, topical ointments, or medications such as finasteride, Propecia, and minoxidil (Rogaine). Moreover, common hair loss medications are also known to bring with them many side effects. Over-the-counter medications may be effective but they

have a low potency and lower success rates.

?You can opt for hair implants but that carries with it a lot of risks such as infection and the side effects caused by painkillers prescribed for the post-surgery discomfort,? says Dr. Malti Gupta, the founder of Safe Laser Therapy LLC. ?Cold laser therapy, on the other hand, uses near-infrared low-level laser light to promote fast tissue repair and allows the body to heal from hair loss naturally.?

Using a handheld laser, concentrated light at a prescribed wavelength penetrates the skin and interacts with the tissues and cells. The laser irradiates photons into the scalp tissue which get absorbed by weaker cells triggering healthy cell regeneration and growth. It also increases the amount of nutrients and oxygen made available to the cells, speeding up the process of regeneration.

?At Safe Laser Therapy,? Dr. Gupta says, ?we begin by targeting the area of the scalp where the hair loss has occurred. The laser penetrates the scalp and interacts with cells in the tissue of the hair shaft while also increasing blood flow throughout the scalp. Your body?s natural oils or flaky skin can plug the hair follicle, which inhibits growth. Laser treatments clear the hair shaft and stimulate hair follicles, causing the shaft to form more tightly around new hair growth. This strengthens the hair strand and gives it the appearance of being thicker, and it won?t fall out as readily. The regimen typically lasts 14 sessions that take place over the course of 12 weeks, the minimum amount of time it takes to see new growth.?

Safe Laser Therapy LLC has received several 5-star reviews from customers who praise Dr. Gupta for making an impact on their lives. The clinic boasts a perfect 5-star rating on its Google Business Profile from over 20 reviews with customers thanking Dr. Gupta for her knowledgeable advice and the customer service offered by the helpful staff.

A recent review says, ?I went to Safe Laser Therapy with my mom because she was suffering from sciatica pain. This therapy was a life-changer for her. She felt the difference right away after the session, a lot of decrease in the pain, and felt very relaxed after... Few sessions are necessary for sciatica but I would 100% recommend Dr. Malti?s services. She is so nice and so friendly.?

Another satisfied client writes, ?An experience like no other! Malti takes a personal interest in your goals and works closely with you to help achieve them AND get optimal results. The treatments offer a variety of positive effects ? some you wouldn?t even expect ? and your time with Malti will always leave you feeling as though you?ve just spent time with a very close friend. A truly positive experience all around every time. Welcome to the new you!?
