

## **Toronto Functional Medicine Centre Explains the Skin Health Benefits with Glutathione IV Therapy**

*September 28, 2023*

TORONTO, ON - September 28, 2023 - PRESSADVANTAGE -

Toronto Functional Medicine Centre in Toronto, ON, Canada, has recently released a blog post that explains the skin health benefits that may be obtained from glutathione IV therapy. Glutathione (GSH) is a kind of peptide composed of three amino acids: cystine, glycine, and glutamic acid. Studies have indicated that a deficiency in glutathione may play a vital role in the aging process, particularly with longevity. The lack of glutathione has been implicated in a number of aged-related diseases, such as those related to mitochondrial dysfunction, neurodegeneration, and even cancer.

At the IV Lounge of Toronto Functional Medicine Centre, they can discuss glutathione's role in skin care and provide an intravenous drip for the patient. It is important to note that GSH levels in the body may decline due to chronic conditions (particularly chronic stress), viral illness / infections, autoimmune conditions, engaging in an unhealthy diet, and pollution. Furthermore, age-related conditions may also contribute to a reduction in glutathione levels, resulting in various kinds of effects, such as lack of energy, poor cellular health, brain fog, and low immune function. With low levels of glutathione, an individual may also experience poor skin health and more oxidative damage that may result in poor skin elasticity and wrinkles.

There are various ways in which GSH may benefit skin health. First, glutathione may promote the elimination of toxins from the body. According to a certain study, GSH may deal directly with the root causes of oxidative stress, such as persistent organic pollutants and mercury. It has been noted that oxidative stress may have an influence on the aging process, sometimes resulting in an uneven skin tone or complexion. Glutathione has been called "master antioxidant" because it may be able to prevent cellular damage by detoxifying free radicals that may cause oxidative stress.

Second, glutathione may help in the replenishment of skin hydration. Studies have revealed that free radicals may hamper collagen production, which may reduce the skin's set of enzymatic antioxidants. Scientists believe that this reduction may hamper the ability of hyaluronic acid to keep moisture in, which may then result in wrinkles formation. With glutathione's detoxifying effect, it may support the rehydration of fluids by helping the other antioxidants.

Third, GSH may promote skin brightening. Skin pigmentation may be reduced by glutathione supplementation. It was also noted that GSH may also help with skin elasticity at various places, for both sun-protected and sun-exposed skin.

At the IV Lounge, they provide IV vitamin therapy drips that offer complete absorption of nutrients for the patient. Full absorption may be provided by IV therapy because it involves inserting an intravenous tube into the patient's vein, the formula with therapeutic doses of nutrients go directly into the blood circulation, bypassing the digestive tract. Oral supplementation has the disadvantage of having to go through the stomach and the digestive tract, which doesn't offer complete absorption of the nutrients. It may even be worse for people with malabsorption issues, which may result in the nutrients not getting absorbed at all by the body. At the IV Lounge, they offer glutathione as an IV drip. Before this, a comprehensive diagnostic session is held with the patient to rule out any underlying problems, find out if the patient has allergies to certain IV solutions, and comprehend the patient's health status.

Those who want to learn more about glutathione IV therapy, including how it may benefit the skin, can visit the Toronto Functional Medicine Centre website or contact them on the phone at (416) 968-6961 or through email at [info@tfm.care](mailto:info@tfm.care). They are open from 9:00 am to 6:00 pm on Mondays and Wednesdays; from 10:00 am to 5:00 pm on Tuesday and Thursdays; from 9:00 am to 5:00 pm on Fridays; and from 9:00 am to 4:00 pm on alternating Saturdays.
