

## **New Technology Offers Innovative Services at Beauty & Health by Liz**

*September 26, 2023*

Tucson, Arizona - September 26, 2023 - PRESSADVANTAGE -

Tucson, AZ ? Beauty & Health by Liz, the medical spa and wellness center in Tucson, has recently announced that they have acquired new technology that will allow them to offer updated services. The new devices include the Alma TED laser hair restoration device, which will be used to reverse hair loss, and the AviClear laser, an anti-acne device that helps the practice treat numerous patients across all age groups. By expanding their services with the latest advancements in aesthetic medicine, Beauty & Health by Liz remains dedicated to providing their signature ?royal treatment? to all patients.

The Alma TransEpidermal Delivery (TED) laser system is a unique solution that can restore hair to its maximum fullness. Engineered to address hair thinning and loss, this state-of-the-art device employs non-invasive techniques that use ultrasonic acoustic sound waves, air pressure, and a proprietary topical formula. All together, they synergize to amplify the penetration of necessary nutrients and growth factors for the follicles while improving blood circulation and scalp health. The outcome is robust, dense hair growth that?s devoid of discomfort and shedding, as the TED system uses temporary pathways to allow hair molecule signals to penetrate through to the hair bulbs, enhancing growth.

"At Beauty and Health by Liz, we always want to bring the very best solutions to our patients. It's our job to ensure that as technology in the industry continues to innovate, we're moving just as quickly to give our patients access to the best of the best," said Lizbeth "Liz" Guerrero, founder and namesake of the practice. "TED Laser Hair Restoration is amazing. It's versatile and safe for nearly every skin type and condition, and it's also described as less painful than other methods of hair restoration, such as platelet-rich plasma. We love the results we're able to create with it and know our clients will too."

Boasting advantages such as painless treatment, zero trauma to the scalp, and strength-enhancing effects on hair follicles, the Alma TED system offers an array of benefits. Improved hair density and a non-disruptive treatment process contribute to its allure, promising healthier, fuller hair without the need for downtime or recovery. Guerrero's practice focuses on providing regenerative solutions with lasting effects, something TED fulfills with its intrinsic mechanism.

AviClear is an advanced laser treatment that employs a 1726 nm light wavelength to address the condition at its source: overactive sebaceous glands that generate excessive sebum, or oil. By targeting these glands, the laser curbs their activity without harming surrounding skin cells. The device is capable of treating comedonal, inflammatory, hormonal, and cystic acne and is suitable for all skin tones and types. Anywhere acne is prevalent can be treated, from the face to the chest, back, and shoulders, and the lack of damage to surrounding skin cells makes it a minimum downtime treatment that's capable of simplifying patients' skincare regimens.

"Acne finally has a permanent solution with AviClear," continued Guerrero. "I love this technology because it makes such a difference for patients of all ages, whether they're teens, adults, or even seniors. Acne is never a pleasant thing, and we finally have something that bypasses all the downsides of other treatments like topicals and medication. I always want to stay ahead of the curve and keep my eye on industry developments, and it was clear to me that our clients would really benefit from AviClear. I can't wait for them to see what's possible with it."

Beauty & Health by Liz is open and taking appointments for new and existing patients.

About Beauty & Health by Liz

Beauty & Health by Liz is a full-service medspa in Tucson that offers a vast variety of medical services and aesthetic treatments since its opening in 2020.
