October 10, 2023

October 10, 2023 -
Ireland HVAC, a trusted HVAC company serving Greenwood and Columbus, IN, is offering furnace repair services to local homeowners and guiding them on the right way to take care of their HVAC systems. For more information, visit https://irelandhvac.org/heating-services/furnace-repair/.

Furnaces are vital to keeping homes hospitable during the cold winter months. A malfunctioning furnace quickly leads to discomfort for the home?s occupants, especially when the weather outside is unforgiving. According to a recent survey, more than 40% of all American households have experienced a malfunctioning furnace in the last 5 years. Thankfully, there are several steps that homeowners can take to ensure their furnaces operate optimally throughout the year and keep the property warm and comfortable for everyone living under its roof.

Some of the surefire signs that a furnace needs repairs include strange noises such as rattling, banging, or humming coming from the furnace, low airflow from vents even when the blower is operating at high speed, uneven heating throughout the house, with some rooms warmer than others, and energy bills that have been higher than normal lately due to increased usage of the system.

These issues can be indicative of a failure to start up, furnace burners not igniting properly, or burners producing insufficient heat. In such cases, there could be an issue with the draft inducer motor or gas valve. Moreover, improper combustion due to clogged filters or blocked vents can cause incomplete burning and potentially dangerous levels of carbon monoxide in the home. There can also be other minor and major issues such as faulty flame sensors and safety switches and cracked heat exchangers.

The spokesperson for Ireland HVAC offers advice on how common furnace problems can be mitigated. They say, ?Regular maintenance is a must. Change your furnace filters monthly during peak usage times such as the fall and winter seasons. Schedule an annual inspection by a qualified HVAC technician who can perform the necessary troubleshooting and cleaning services. Having the furnace filter regularly cleaned and performing an annual checkup will help you keep all of the system?s moving parts such as limit switches and

blower motors in good condition. Finally, consider investing in an energy-efficient HVAC model to minimize the mechanical issues you have to deal with over time. To find out more, visit https://sites.google.com/view/irelandhvac/heating-services/furnace-repair.?

The company also recommends homeowners perform other preventative tasks such as making sure the door on the gas furnace, electric furnace, or tankless water heater is tightly sealed, checking limit switches and safety switches regularly, cleaning ducts, changing filters, inspecting vents, cleaning burners, and lubricating motors, and blower fans. At the end of the day, the best way to ensure that the maintenance tasks are handled to the highest standards is by leaving them up to the professionals, such as the team over at Ireland HVAC.

?Furnace systems are very complex,? says the spokesperson. ?Inspecting and repairing furnaces not only requires a thorough understanding of the systems but also an experienced eye to spot small issues before they turn into big problems. Professional HVAC contractors also stay abreast of current regulations governing the proper installation and use of central air conditioning units. Hiring the right professionals ensures that the repairs are completed accurately, and the furnace works trouble-free for a long time.?

Ireland HVAC offers heating and cooling system contractor services for both residential as well as commercial properties. Along with diagnostic services and repair of HVAC systems, the company also provides the new and replacement installations of a wide range of home HVAC equipment including central air conditioners, heat pumps, gas and electric furnaces, and dual-fuel hybrid heating systems. Ireland HVAC also offers free, no-obligation on-site assessments and estimates for repairs as well as new installations in homes and businesses.
