

Multiplication Flash Cards Allow Children to Still Acquire Education During The Christmas Period

December 21, 2015

December 21, 2015 -
Saratoga, FL - Parents are sometimes worried about their children not remembering their lessons once going on holidays. Some parents believe that once children go on the Christmas break that it will cause them to lose some of the information learned. Then once the child starts back at school they will have to go over material again and relearn. Simply Clever Cards has provided a solution to calm parents? nerves. They have released a deck of multiplication flash cards that allow children to keep up with their mathematics lessons in an engaging way.

The multiplication flash cards are a smartly designed deck of cards that are made specifically to entice the modern generation of children. The flash cards provide an educational experience that is geared towards giving children the best practice in basic arithmetic concepts. The flash cards are useful to assist student?s memory and comprehension of basic mathematics.

According to Simply Clever Cards the best and easiest way to make children more interested in learning is by allowing it to be more fun. The company highlighted that various recent studies show how, by stimulating the pleasure center of the brain, the learning process gets enhanced. It allows the learner a better chance of

achieving success in gaining knowledge. The flash cards allow the learning experience to be improved and engage better understanding of key arithmetic principles.

The multiplication flash cards were manufactured for children aged 7 years and older. It can assist in the teaching of children in the kindergarten to primary school age groups. Parents can use the flash cards as a homeschooling tool during the holiday season. According to Simply Clever Cards, the deck of cards allows learning arithmetic to be fun and simple. Additionally the cards are interactive and according to the company not as boring as normal flash cards on the market.

While using the multiplication flash cards to learn during the Christmas season, children can also play normal card games. These can include Old Maid, Go Fish, Memory, Crazy Eights, War and UNO. This is because the deck of cards has the normal set of fifty two cards like a normal card deck. However these cards are designed slightly different for learning purposes. They are numbered from zero to twelve and contain four distinct colors. There are also included four jokers to make a more complete and versatile deck.

The family can take the multiplication flash cards on their various excursions during the holiday period. Children can become engaged while at the beach, going out camping, sleeping over at friend?s houses or when the family is on vacation.
