

Nanotise Is Offering Commercial Mould Removal Services In Sydney

October 23, 2023

October 23, 2023 - PRESSADVANTAGE -

Nanotise, a sanitizing solutions company based in Wahroonga, NSW, is urging local Australian businesses to find out more about its commercial mold removal services.

With over 16 years of experience, Nanotise provides all the services needed to remove harmful mold from workplaces, construction sites, and commercial properties. The second-generation family business uses smart nanotechnology solutions to get its clients' properties rid of all harmful mold and bacteria and make workplaces safer for their customers and tenants.

The company's commercial and industry mold remediation services include mold removal in commercial buildings such as warehouses and offices, mold removal in aged care facilities, mold removal in health care and hospitals, mold removal in child care and education facilities, mold removal in hospitality locations, mold removal in residential and commercial construction sites, and more.

Nanotise takes a whole-of-building approach to mold remediation. The company's employees treat ceiling and wall cavities and HVAC ducting where required. With a Nanotise treatment, customers don't have to rip out affected timber or gyprock as its treatment deactivates mold spores and provides long-term protection against mold spreading or returning, reducing the risk of warranty claims.

The Nanotise commercial mould removal process has four key steps. First, the mold is killed from every confined space it has infected including ceilings, sub-floor areas, and wall cavities. Chlorine dioxide gas is pumped into the spaces to effectively and quickly remove mold with no residual toxicity left behind. Next, the company's technicians hand clean the surfaces including walls, ceilings, cabinetry, décor, and equipment to remove the dead mold using its exclusive antimicrobial and antifungal formulations.

The second step prepares the surfaces for the CRX antifungal bonding, says the company's

spokesperson. ?It is a ground-breaking Australian-made product that has strong antifungal and anti-microbial properties. Once dried, it forms a long-lasting microscopic barrier that protects surfaces and inhibits future mold growth. The eco-friendly and non-toxic product is also ideal for treating mold-affected timber during a home or building?s construction phase.?

Finally, Nanotise provides its clients with a mold treatment certificate specifying the treatment that was carried out. If required, the company can also supplement it with ATP swab testing and/or tape-lift and RODAC plate sampling to indicate the hygiene of the surfaces post-treatment.

Nanotise has received several glowing testimonials from its clients over the years who praise the company for its swift and helpful customer service, the professionalism of its sanitization crew, and the wide range of effective infection control and mold remediation solutions. The company even boasts a perfect 5.0 out of 5.0 overall rating on its Google Business Profile.

One client says, ?We had an outbreak of Norovirus (gastro) among the children and carers totaling around 12 cases, and we closed the center. I immediately contacted No Germs who responded straight away and came to treat the premises. We reopened the center the following day and had no additional cases reported (even several weeks later).?

Another review says, ?As host of a prestigious Sydney Air BNB, we needed a quick, professional, and comprehensive service. The Nanotise team went over and above to deliver an outstanding result. We opted for a full suite of services, including sanitization, mold management, and cleaning. I highly recommend them.?

The spokesperson urges business owners to schedule a mold inspection on their commercial property by saying, ?Growing during periods of high humidity or prolonged dampness with poor ventilation, if not treated quickly and effectively, invisible mold spores can spread rapidly through the air and colonize other areas of your home or building. While they are not toxic themselves, mold spores can negatively impact people who have asthma or other respiratory sensitivities, weakened immune systems, or allergies. Some of the common symptoms include sneezing, coughing, headaches, nasal congestion, and watery eyes. With Nanotise, you get a comprehensive mold remediation solution that protects your employees, customers, and guests from serious health problems and conditions.?
