

Sydney Roofing Company Explains What It Means to Add Sarking Under the Roof

October 26, 2023

October 26, 2023 - PRESSADVANTAGE -

Sydney Roofing and Gutters, a company based in North Sydney, NSW, Australia, has recently posted an article that explains the importance of adding sarking under one's roof. Roof sarking involves the placement of a special, pliable layer inside the roof to help prevent the buildup of moisture that may cause problems in the roof cavity. Roof sarking should not be confused with roof insulation because they have different roles in keeping the roof in good working condition. The roof insulation is tasked with controlling the temperature in the home while roof sarking keeps the moisture content inside the roof to a minimum.

Brendan Rice from Sydney Roofing and Gutters explains, "Although roof sarking may not be mandatory, it's still an effective way to avoid having to pay thousands of dollars in roof repairs in the long run. That means it's not so much a question of whether sarking is necessary, but whether or not the price of sarking your roof now outweighs the cost of potential damage to your roof in the near future."

There are two primary purposes of roof sarking. The first one is to support the roof in its task of protecting the home and its residents. The second one is to protect the value of the home in the long run. The expert roofers in North Sydney that can be provided by Sydney Roofing and Gutters would be able to determine whether the sarking is working properly or whether it has to be partially repaired or replaced entirely.

The primary advantages of having a fully functional roof sarking is prevention of moisture, water vapour, and the accumulation of mould that could negatively affect the health of the roof. It creates a waterproof barrier in the roof that will block the entry of water that might seep in through gaps and breaks in the roof. Moisture that can get inside can compromise structures.

In addition to water damage protection, another benefit offered by sarking is the provision of another layer of security against sparks, ash, embers, smoke and other debris. In urban environments, sarking can help in keeping out dust and other pollutants to allow residents to breathe more comfortably inside the home. For

those who are in the process of constructing a new home, the addition of roof sarking can help key the home's frame being exposed to the rain and keep it dry.

Roofing sarking and roof insulation can also provide a way to save on electric utility expenses to keep the home cool during summer and warm during winter. Specifically, sarking can help reflect excess heat while keeping out unwanted moisture to regulate the temperature inside the home, without spending more on electricity to power the heating and cooling systems. This means less energy costs and less emissions.

With regards to the replacement of roof sarking, Brendan Rice says, "The cost and price of replacing your roof sarking will depend on how much of it needs to be replaced and the kind of new roof sarking material you'd like to have installed. The best way to get an accurate estimate of how much you'll need to pay is by reaching out to your local roofing experts. Once you get a team of professionals to inspect your roof for you, you'll have a better sense of how much of your sarking needs to be replaced, and how much that will cost you."

Sydney Roofing and Gutters has been in the roofing industry for over five years and they have been expanding by delivering top-quality services. The company is backed by fully-licensed roofing experts with an established record in roof repairs, roof restoration, roof maintenance, roof replacement, and complex gutter-related jobs. They are capable of satisfying all roofing requirements because their roofing technicians are experts in all kinds of roofing and gutter services. The services they can provide include: new installations of gutter and downpipe systems; valley replacement; ridge capping; re-pointing; gutter and roof restoration; and gutter leaf guards installation.

Those who are interested in truly understanding what is roof sarking can visit the Sydney Roofing and Gutters website or contact them through the telephone or by email.
