

# Sunflower Spa Offers Updated RF Microneedling Services with New Genius Device

*October 25, 2023*

Longmont, Colorado - October 25, 2023 - PRESSADVANTAGE -

Longmont, CO, ? Sunflower Spa has announced that they will now provide radiofrequency (RF) microneedling services using their new technological addition, Luctronic?s Genius device. RF microneedling provides a simple solution for a diverse array of skin concerns and longer-term regenerative enhancement effects for the skin, allowing Sunflower Spa providers to noninvasively treat a wide variety of issues. With the addition of Genius RF microneedling, Sunflower Spa reaffirms their commitment to providing optimal aesthetic care for patients in Longmont.

?We always want to bring on new technologies that will benefit our patients in every way possible,? said spa owner Patrice vonMetzger. ?I love the possibilities that are achievable with radiofrequency microneedling, from anti-aging services to scar reduction and everything in-between. The Genius really stands out to us because it can reach deep into the skin with minimal inflammation and can be used for a diverse range of issues. We love it, and we know our patients will too.?

Luctronic?s Genius RF microneedling device combines radiofrequency heat energy waves with the controlled injury regenerative healing powers of the gold-plated microneedles. By heating and puncturing the skin?s deeper layers, the device stimulates the production of collagen and elastin, the skin?s essential proteins that minimize the visible signs of aging and give the skin.

Another effective feature of the Genius is its real-time impedance feedback feature known as ?Intelligent RF Delivery,? which allows for a more precise, safer treatment as it alters its energy delivery based on skin response. With adjustable depth settings, the Genius device offers completely customizable treatments, addressing various skin concerns in a highly personalized manner.

?The Genius is engineered differently from other devices on the market,? continued vonMetzger. ?It?s the first, and only, existing RF microneedling device available that has exact needle insertion depth with smart,

real-time pulse delivery feedback. That means our providers can optimize each treatment even further for stunning results. We can determine the actual energy of every delivered pulse to the skin, which also allows our patients to receive treatments in more sensitive areas, something that is useful for treating delicate skin that is first to show signs of aging and damage. That kind of customization is what we strive to provide at Sunflower Spa, because we believe that every patient deserves treatment that meets them where they are.?

The Genius device leaves the topmost layer of the skin intact in order to minimize the downtime after treatment. This mechanism also bypasses common pitfalls that are often associated with using similar laser devices on darker skin tones, making the Genius suitable for a wider range of patients.

“Offering tailored care is what we do,” added vonMetzger. “The Genius takes the guesswork out of it for providers and is clinically proven to provide optimized treatment protocols for every skin type and age group. I’m so excited for our patients to experience the rejuvenating benefits of Genius RF microneedling, because I’ve seen firsthand what amazing results it creates.”

Sunflower Spa is open and taking appointments for new and existing patients.

## About Sunflower Spa

Sunflower Spa Injectables and Medical Aesthetics has been Longmont’s premier aesthetics spa since 2005. Offering treatments and services at the intersection of science, technology, and medicine, Sunflower Spa offers cutting edge skin care to Longmont residents with a focus on rejuvenation and wellness, featuring treatments like IV drips, relaxing massages, medical weight loss, and skin-reviving services like HydraFacial® among others.
