

Advanced LASIK Technology Offered by Bagan Strinden Vision Revolutionizes Vision Correction for a Clearer Future

November 30, 2023

November 30, 2023 -
Bagan Strinden Vision, a company based in Fargo, ND, is offering advanced LASIK technology that is a game-changer in the field of vision correction. By applying state-of-the-art methods and precision, they are offering a customized approach to make sure they address every patient?s unique needs. This technology involves laser vision correction, LASIK surgery, cataract surgery, expert eye care, and refractive surgery that Fargo residents can depend on.

LASIK, which stands for laser-assisted in situ keratomileusis, is an advanced type of refractive surgery that employs laser technology to adjust the shape of the cornea as a way to enhance the patient?s vision. Its primary aim is to reshape the cornea to correct vision. LASIK is usually recommended for people with mild to significant farsightedness, nearsightedness, or astigmatism who have stable vision and realistic expectations about the procedure. On the other hand, patients with an extremely high refractive error have too little corneal tissue and have certain eye diseases like rheumatoid arthritis or diabetic retinopathy which makes them not likely to be good candidates.

Laser eye surgery offers a variety of benefits for people who desire to enhance their vision. One of the key advantages is that it is a fast a practically painless way to have better vision. It will only take a few minutes for each eye and patients are able to get back to their usual daily routine in just a day or two. Another important benefit is that it can also reduce the patient?s dependence on corrective eyewear, such as contact lenses or eyeglasses.

Dr. Bagan and Dr. Striden also integrate the advanced technology of cataract surgery with laser vision correction to provide an extremely successful way of reversing vision loss. One of the key benefits of cataract surgery is that it can substantially enhance vision, allowing the patient to do daily tasks such as driving, reading, or watching TV much easier. It can also enhance the quality of life by decreasing the risk of falls and boosting the person?s independence. It can also provide long-term benefits for eye health because the removal of cataracts reduces the risk of developing glaucoma.

Those who might need cataract surgery include those who have vision loss, color distortion, difficulty seeing at night, or blurry vision. Doctors will typically recommend cataract surgery to those whose symptoms are hampering their daily activities such as sports, work, or reading in situations where visual aids or eyeglasses are not enough. However, it is important to note that only an eye surgeon, such as Dr. Bagan and Dr. Strinden, can determine if a particular person needs to undergo cataract surgery.

Bagan Strinden Vision is a company focused on the latest refractive surgery choices, such as implantable contact lenses and LASIK surgery. Their world-class staff and state-of-the-art clinic in Fargo can provide patients of all ages with the expert and personal care they deserve.

The medical doctor behind the company is Dr. Tom Strinden, MD. Dr. Strinden obtained his MD from the University of North Dakota School of Medicine in 1988. He finished his ophthalmology residency at the University of Wisconsin, Madison. He has done more than 40,000 major eye surgeries in his 30 years of medical malpractice. He started doing LASIK surgeries and providing multifocal implants in 1999 and has done more than 20,000 cataract surgeries and provided over 1,000 patients with multifocal lenses.

Those who are looking for a LASIK expert in Fargo can check out the Bagan Strinden Vision website or contact them through the telephone or by email.
