Drystar Restoration Is Offering Emergency Sewage Removal Services In Phoenix

November 20, 2023

Mesa, Arizona - November 20, 2023 -
Drystar Restoration is providing one of the most comprehensive and seamless services for emergency sewage removal Phoenix has to offer.

Sewage backup needs to be immediately dealt with as it is a much more pressing problem than just faulty plumbing or property damage. Sewer backups are nothing less than an emergency as the water may contain viruses, bacteria, and other microbes that cause serious illnesses and pose a health risk to those living in or using a property.

?There are three categories of contaminated water,? says the spokesperson for Drystar Restoration. ?Category 1, clean water, is from a clean source such as a broken water supply or a leaking faucet. If not treated quickly, it can turn into category 2 or 3. Category 2 refers to gray water that is contaminated and could cause discomfort or illness. Examples include washing machine overflow and toilet overflow with some urine but no feces. Finally, Category 3 water, the most dangerous, is grossly contaminated and can cause severe illness or death. All contact with Category 3 water should be avoided.?

At Drystar Restoration, the crew uses a 6-step process for eliminating all sewage backup and restoring its clients? properties to their former glory. It begins with the fast response to emergencies that Drystar Restoration is known for providing to its customers. Next, there is a detailed inspection of the sewage backup and contamination including an inspection of the building?s interior and exterior to make sure that the scope of cleanup and disinfection will be adequate following a sewage or plumbing drain backup or leak.

Next, during the cleaning phase, all salvageable contents such as hard-surfaced furniture, dishes, and plastic items are removed from the sewage backup area, cleaned, and stored. To prevent cross-contamination, the company takes measures to ensure that the sewage-contaminated soil is not tracked into the living area and that no airborne sewage-contaminated dust is blown to other building spaces.

Then, contaminated drywall, carpeting, carpet padding, paneling, building insulation, and similar materials are removed from the affected area. Finally, the standing water is removed, solid waste is collected and discarded, and the area is prepared for rapid drying and dry cleaning.

Drystar Restoration has been repeatedly praised by local Phoenix homeowners and businesses for rushing to their aid in their time of need and solving their emergency water damage problems. The company even has an impressive overall rating of 4.6 out of 5.0 on its Google Business Profile from over 120 reviews. Customers thank Dry Star Restoration for its quick and thorough property damage restoration services, affordable pricing, and responsive customer service.

One customer writes, ?What an amazing company! From my first call with Robbie to meeting with John to meeting Marty for the start of the cleanup. They were so fast to respond to our needs. We had a condo that flooded and they got there so quickly and started cleaning up right away. They had to remove cabinets, and all appliances, and furniture had to be trashed. This will now be my only go-to company for restoration services and I highly recommend them to anyone!!!! I would give more than 5 stars if I could.?

Another review says, ?When my house flooded, I called Drystar and they were there within 30 minutes. They were very professional and handled everything for me. They packed my house up, did the dry out, and even did the remodel. Drystar went above and beyond to ease my stress in a very stressful situation. I would highly recommend them to anyone!?
