Medical Lab Provides Full Range Of Testing Services In Nicosia

December 07, 2023

December 07, 2023 - PRESSADVANTAGE -

Promitheas Medical Lab, based in Cyprus, is offering a range of medical tests at its new lab in Nicosia. Proudly serving the entire community, the lab invites all interested parties to get in touch for convenient, reliable, and accurate medical testing services.

"No matter how healthy your lifestyle may be," commented a representative from Promitheas Medical Lab, "you will inevitably be required to engage with the medical system for any of a variety of reasons. Whether ordered by your doctor, a workplace, or needed for any other reason, we are here to reassure you and guide you through the process. You can trust us to pay the utmost respect to your privacy and comfort, supported by a foundation of experienced, professional medical staff and state-of-the-art testing apparatus. For all your medical testing needs, come to Promitheas Medical Lab."

Blood tests, for instance, can give doctors a great deal of insight into a patient's well-being and rank among the most common types of tests run anywhere in the world. All manner of blood tests are available at Promitheas Medical Lab, and the lab is pleased to confirm that anyone may walk in without an appointment if blood draws are required.

Given that patients often need medical testing to address their health concerns, the lab assures the community that their results will be made available as soon as possible. Accuracy takes the highest priority at Promitheas Medical Lab, but delayed results may negatively affect the outcome of a patient's condition. To avoid this, the lab has invested heavily in both staff and equipment, seamlessly combining these assets to ensure results are delivered to patients and healthcare providers in a timely manner.

On this note, the lab is pleased to confirm that its diagnostic laboratory is ISO 9001:2015 certified. This guarantees that all tests are conducted under frequent and strict quality controls. To protect every patient's privacy, any medical history generated at the lab is stored in a dedicated, secure database. This secure storage is offered in line with the European regulation on the protection of personal data General Data Protection Regulation (GDPR).

A large variety of laboratory and imaging tests are available at Promitheas Medical Lab (in addition to blood tests). Many of these tests are run during scheduled appointments to guarantee optimal patient processing, so it is recommended that interested parties contact the lab's office directly to inquire about the nature of specific tests. Some patients may also not be able to visit in person to have their blood drawn – fortunately, the lab offers a home blood collection service to accommodate anyone in this situation.

The lab currently offers the following: immunology tests, food intolerance tests, rapid tests and PCR tests (for COVID-19), DNA tests, pre-operative tests, and more. Patients may also make use of the lab's microbiological examinations, endocrinological examinations, and so on, along with a range of specialised exams. Their FDA-approved imaging services are similarly varied.

"When you visit Promitheas Medical Lab," states the lab's representative, "you will enjoy the benefit of a safe, friendly, and modern environment. Our team makes it a point to approach every patient on an individual basis, ensuring you always have our undivided attention no matter how long or brief your tests may be. We understand that people often come to us following a health scare, so we take every measure we can to provide a straightforward and comfortable testing process."

Patient comfort is necessary no matter the patient's age or background. However, the lab does pay special attention to children to minimise any stress and anxiety. Should a patient believe they would benefit from additional accommodations, they are encouraged to discuss their needs when making their appointment.

Promitheas Medical Lab seeks to assist the community in the early detection and prevention of health issues, monitoring of chronic conditions, and much more. The team is committed to maintaining an accessible and

convenient service for all, and more information regarding the testing services on offer can be found on the lab's official website. Further questions and concerns may also be directed to Promitheas Medical Lab's main office.
