Jules Winnfield from Well Groomed Warrior says, ?Yves Saint Laurent is a name associated with luxury, lavishness, and, of course, quality. Any man who wishes to present himself as sophisticated and stylish would be wise to consider a fragrance from Yves Saint Laurent?s wide range of fragrances. However, making the most of YSL?s great selection of fragrances means not only choosing the best fragrance to fit your needs, but also making sure it lasts.?

As Well Groomed Warrior explains, one of the most important factors that affects how strong a fragrance smells and how long it lasts is how concentrated it is. Fragrances have different concentrations, depending on the formulation, and some are simply incapable of enduring longer than a few hours. Aftershaves or eau de colognes, for instance, have lower concentrations, but they can be applied more liberally to make them last longer and smell stronger. On the other end of the scale, eau de parfums and solid perfumes have much stronger concentrations, and a little can go a long way when using these products.

YSL products such as L'homme Intense or La Nuit De L'Homme are eau de parfums that have around 8-15% concentration, making them excellent choices for anyone looking for a stronger scent. YSL also has a great variety of eau de toilette (4-8% concentration) for those who want something lighter. Once the right fragrance has been picked out, Well Groomed Warrior says certain techniques can be used to augment their longevity. First and foremost among these is taking advantage of a post-shower skin (which is

moisturized and primed to hold on to scents for longer). If there is no time to take a shower before applying a cologne, Well Groomed Warrior recommends moisturizing first. Moisturizing skin with an oil-based lotion or cream (preferably unscented) can be very helpful. For best results, users should shower, pat dry, then moisturize before spritzing.

The website also states that perfume should be applied directly to the skin. Fragrances smell better and last longer when they are in contact and mix with the human body?s natural oils. A lot of men apply perfume onto clothing or fabric, which can dampen and reduce the effectiveness of the fragrance. Instead, they should spray it directly onto the skin, aiming for pulse points.

Pulse points include the wrists, nape of the neck, behind the knees, behind the ears, and inside the elbows. These areas react with the natural fluctuations of body temperature and are able to emit the scent throughout the day. Similarly, though it is not recommended to completely douse this area in perfume, a light misting of fragrance onto the hair can maintain the desired scent throughout the day.

Well Groomed Warrior also points out that some men have made a habit of spraying fragrance onto their wrists and rubbing it together. While this may seem to help, it actually does not. The action can not only diminish the quality of the fragrance, it also interacts negatively with the profile of the perfume.

Beyond tips and tricks about the application of cologne, Well Groomed Warrior also offers a number of additional tips to ensure best results. First, the website recommends using matching scented products (such as body wash, lotion, and other skin products), which can help men optimize their fragrant qualities. Further, for maximum effectiveness, perfumes should be stored in their original bottle in a cool, dark place. They should also not be shaken before use.
