

S&J Plumbing and Gasfitting Completes 200 Hot Water Pump Installations Resulting into 200 Brisbane Homes with Energy Savings

December 12, 2023

December 12, 2023 - PRESSADVANTAGE -

S&J Plumbing and Gasfitting, based in Eagle Farm, Brisbane, QLD, is proud to announce they have reached the milestone of installing their 200th hot water pump of the year. The Brisbane plumbing and gasfitting company also wants to add that this means 200 homes in Brisbane benefiting from substantial energy savings. Depending on the make and model, a new hot water pump can deliver 2 to 3 times more energy efficiency than conventional water heaters.

James McNee, Managing Director of S&J Plumbing and Gasfitting, says, "At S&J, we believe in not just providing top-notch plumbing services but also in contributing to the well-being of our community and the environment. The completion of our 200th hot water pump installation is a testament to our dedication to sustainability and energy efficiency."

As a company, one of the key differentiators that sets S&J apart from similar providers in Brisbane is their commitment to excellence and their focus on providing environmentally friendly solutions. Clients can rest assured that they will continue to champion energy-efficient practices.

Aside from installing hot water pumps, their licensed plumbers are also experts in blocked drain services. With their expertise, customers can feel reassured they do not have to endure the frustration of blocked sinks, toilets, laundry troughs, tubs, sewers, or stormwater drains. They have the expertise, experience, and cutting-edge tools to handle all kinds of difficult blockages, ensuring seamless flow in a home's plumbing system. By utilising precision CCTV camera inspections, they are able to get a clear visual depiction of the root cause of drain blockages. From chemical drain cleaning solutions to quickly break up extremely challenging blockages, the S&J team provides customized solutions for their customers' unique needs.

There are a number of materials and objects that are the typical causes of blocked drains. These include tree root, non-flushable toiletries, hair, elastic bands, dirt, silt, poor pipe installation, grease or fat, foreign objects, heavy rains and storms, poor water flow, and broken pipes. They recommend that households contact an expert plumber as soon as possible to address blocked drains promptly. This is essential because blocked drains that are unattended to can lead to more serious plumbing problems.

S&J Plumbing and Gasfitting offers a wide range of services in Brisbane. These include: backflow testing, plumbing, hot water systems, gas fittings, toilet repairs and replacements, burst water pipes, and commercial plumbing. Backflow testing is a service that can prevent dangerous situations in which the water supply gets contaminated with sewage, chemicals, and other dangerous contaminants. They can provide both installation of backflow prevention devices and ongoing maintenance and testing.

Local governments in Queensland require regular backflow testing and reporting for homes with testable backflow prevention devices. S&J can provide a full report that offers proof of backflow testing. Backflow happens when the water flows back into the main supply, which may possibly poison the water supply. Backflow has two possible reasons. One is backsiphonage, which occurs when the pressure in the water mains supply decreases substantially because of a leak or draw that substantially decreases the flow of water. The other reason is backpressure, which means there is significant pressure within the plumbing network that surpasses the pressure of the water supply from the mains.

S&J Plumbing and Gasfitting is a plumbing and gasfitting company based in Brisbane that has been delivering their services for more than 20 years. With their team of plumbing experts offering high-quality workmanship, the company has developed the reputation of being a trusted and experienced plumbing and gasfitting company. They are focused on providing top quality and affordable services.

When in need of the services of a plumber Brisbane residents can rely on people can check out the S&J Plumbing and Gasfitting website or contact them on the phone or through email.
