New Peppy Case Study: 4 Zone Mini Split System Installation In Eagle, Idaho

January 15, 2024

Boise, Idaho - January 15, 2024 -
Peppy Heating and Cooling, an HVAC contractor based in Boise, ID, has published a new case study that explores why multi-level homes would benefit from individual zoning solutions. This case study of a 4 Zone Mini Split System Installation in Eagle Idaho, is one of a series that the company is releasing as part of their efforts to educate the community about heating, cooling and ventilation systems.

Elaborating on the problem, the company says that one of the most common problems they see in Boise?s multi-level homes is a single system being used to heat and cool the entire property. There are significant drawbacks to this, and the company recently undertook a project that gave them an opportunity to bring this to the customer?s attention. The solution they proposed was fairly straightforward: to divide each level of the home and provide a solution that accommodates the needs of each level on an individual basis.

In their case study, the company says they applied this to a 3-story home, installing a 4-zone mini split system. According to the Eagle, ID homeowner, the home?s upper levels were frequently more difficult to keep at a comfortable temperature, which affected its residents' quality of life. Peppy Heating and Cooling installed four MLZ Mitsubishi Ceiling Cassettes and one MXZ-4C36NA Outdoor unit over the course of two days to adequately correct this problem once and for all.

?This may be one of the best and biggest differences in comfort between before and after this system was installed,? states Brett Shannon, President of Peppy Heating and Cooling. ?With the original system, upstairs would be unbearably hot in the summer. All of the bedrooms are on the upstairs level, so it was always too hot in the summer and made it difficult to sleep or be comfortable on the third floor. Now, with the new 4-zone ductless system, they are able to keep every bedroom at the perfect temperature for each individual person that occupies that bedroom!?

For their part, the customer seems to agree. Echoing many of the other comments the company has received

from the community, they thanked the team for breaking down the advantages and disadvantages of various options and giving them the context they needed to make an informed decision.

The company says they had several reasons for picking a custom Mitsubishi HVAC system. To begin with, Mitsubishi systems are capable of providing customized zoning and uniform heating and cooling, ensuring comfort for everyone in the home. This would have a dramatic impact on the residents? quality of life, an impact they would notice immediately. However, this is far from the only advantage offered by this manufacturer.

For instance, Mitsubishi systems can be used to heat and cool a variety of home types, including homes with multiple levels or add-on spaces. This made them perfect for the customer?s requirements on the surface, but they will also benefit from the fact that Mitsubishi HVAC systems are known for their reliability and durability. Mitsubishi heat pumps are also much more efficient than traditional gas furnaces, and this can save the customer money on their energy bills.

These advantages may lead customers to expect their new Mitsubishi system will require a sizable investment, but the company says this may not necessarily be true. The cost of a custom Mitsubishi HVAC system will vary depending on the size and complexity of the home in question, with further variation being determined on the specific features and options the customer wants. This means there is room for both the budget-conscious customer as well as those who will settle for nothing less than the best.

Peppy Heating and Cooling remarks that Mitsubishi mini split air conditioners in particular are among the most popular choices for homeowners whose priorities include their new system being cost-effective, quiet and energy efficient. The company acknowledges that they may be more expensive than other heating and cooling systems on the market, but their reliability also makes them less expensive to operate on an annual basis. Homeowners are advised to consider the savings they will make on both energy bills and maintenance when estimating costs for a given period.

Based in Boise, Idaho, Peppy Heating and Cooling serves the entire Treasure Valley area. including Nampa, Meridian, Caldwell, Eagle, Payette, Fruitland and Emmett, Idaho. They invite the community to read their case studies or contact the team directly for more information on HVAC systems, custom solutions and more.
