

JG Energy Is Offering Level 2 Electrician Services In Kellyville

January 02, 2024

January 02, 2024 -

JG Energy, a trusted electrician serving Sydney, has opened a new location to serve Kellyville and the surrounding suburbs of the Hills District. To find out more about the new location, visit <https://kellyvilleelectrical.com.au>.

JG Energy is currently one of the highest-rated electricians serving Sydney and nearby areas. With the opening of its newest location in Kellyville, the company is expanding its operations to a whole new customer base that will be delighted to find out that it offers 24-hour emergency services, affordable prices across the board, and qualified and experienced technicians. Its Kellyville location will now serve residential and commercial customers in Beaumont Hills, Bella Vista, Stanhope Gardens, Kellyville Ridge, Parklea, Glenwood, Glenhaven, Kings Langley, Acacia Gardens, and Castle Hill.

James Goldring, the founder of JG Energy, talks about the company's services by saying, "We have over 5 years of experience delivering high-quality Level 2 electrical work in Sydney. In fact, we have established

ourselves as a trusted provider of a complete range of electrical services including design/build, engineering, and maintenance. We are always looking for the next challenge that compels us to step up our game and serve our customers better. The Kellyville location will be offering the same great services that we are known for in Sydney to customers who need the best in the industry to solve all their electrical problems. So, if you are looking for a professional electrician in Kellyville, call us today to set up an appointment.?

Not all electricians are authorized to do the work that JG Energy offers. The company's Level 2 Electricians are accredited and authorized to connect a commercial or residential premise to and from the electrical grid. They can carry out installations, repairs, and maintenance work on service equipment (main links or fuses), metering, and service lines that run between a property (both business and residential) and the electrical supply network.

“Nine times out of ten,” says James, “you’ll be better off contacting a Level 2 Electrician. This is especially true if you have a job relating to the main switchboard, overhead cabling, underground cabling, electricity metering, or anything in between the distribution network (powerlines) and the point of connection (where the incoming mains attach to your building). We can complete all of the work a normal electrician does, plus all of the Level 2 work at the same time.”

Over the years, JG Energy has slowly earned itself a rock-solid reputation among Sydney homeowners and businesses. This is evident in its Google Business Profile which boasts a perfect 5-star overall rating from 16 reviews. In their testimonials, customers thank JG Energy for its professional and courteous crew members, their speed, efficiency, and accuracy while working on the electrical systems, and their friendly and helpful customer service.

One customer says, “James first came to look at our hot water system as we needed a Level 2 Electrician because it wasn't working properly. James ran tests and quickly determined what the problem was and fixed it. We were so impressed and happy with James' business-like manner and extensive knowledge that we asked him to come back and replace our old halogen downlights (All 57 of them!!) with SAL LED downlights. James did this in the same efficient manner as he had done previously. Also, the price was extremely competitive compared to other quotes we've had in the past. I would highly recommend James for all your electrical needs.”

Another client writes, “I am more than happy with the work done by JG Energy. James was easily approachable. The price seemed very fair. Level 2 work was done very well and within the time frame. We had a private pillar installed to replace the old timber private pole, hence no power for the day. So, the speed of reconnection was important and that was done. James worked around the difficulties of my site with no issues. Overall, I am so impressed. Certainly, keeping his details for any future work. Don't hesitate to call James.”
