

Dr. Mark Hickman Is Reducing The Cost Of A Vasectomy Reversal To Make It Affordable For Everyday Americans

January 10, 2024

New Braunfels, TX - January 10, 2024 - PRESSADVANTAGE -

Dr. Mark Hickman, an accomplished microsurgeon with a clinic in New Braunfels, TX, is sharing his technique to reduce the cost of a vasectomy reversal.

Regarded as one of the pioneers in the field of microsurgery, Dr. Hickman has dedicated his whole life and practice to developing an affordable vasectomy reversal procedure. He is guided in his mission by his strong faith as a Christian man which is reflected in his dedication to his church and his passion for the Men's ACTS Retreat Ministry. He also currently serves on the Apostolate Board for the North American Province of the Missionaries of the Holy Family and the Board of Directors of TIPHER (The Institute for Public Education, Health, and Research).

"I have talked to countless patients who describe their years following a vasectomy as some of the toughest in their lives," says Dr. Hickman. "Not only do they struggle with the thought that they have lost a part of

themselves, but they also find themselves dealing with more severe bouts of depression and what they describe as the "male fog." I wish there was more education out there about the side effects of this often-touted method of family planning. However, with my skills and knowledge, I can do the next best thing. I have used my decades of experience to bring the cost of a vasectomy reversal as low as it can possibly get to encourage everyone who has gone through the surgery to change course. So, if you are wondering, can vasectomy be reversed, your answer is yes, it most definitely can.

During the microsurgical vasectomy reversal procedure, which is performed under local anesthesia, a small incision is made on each side of the scrotal skin. The two ends of the vas deferens are found and freed from the surrounding scar tissue. Dr. Hickman then performs a microsurgical repair of the vas deferens using a Zeiss OPMI-MDM operating microscope utilizing a 10-0 nylon suture. The repair requires 10-15 stitches. The goal is to create direct and careful alignment of the lumen of the two ends of the vas deferens and a watertight closure.

Dr. Hickman offers two all-inclusive affordable options. The microsurgical vasectomy reversal cost option of \$3,300 includes local anesthesia and an oral sedative. The \$4,200 offer is performed under IV sedation and is administered by a Board Certified Anesthesiologist. Both microsurgical options are all-inclusive with no hidden fees.

Men and families from all over the United States have thanked Dr. Hickman and his staff for helping them through an intimidating process and delivering assured results. His services have helped countless patients experience the joy of parenthood again, a fact that is readily apparent in the several testimonials highlighted on his website and his clinic's stellar overall rating of 4.8 out of 5.0 on its Google Business Profile.

One patient writes, "It's only been 6 days but my procedure went great. Doctor Hickman and Pat made me and my wife feel at ease during our consultation before the procedure. I could talk to Doctor Hickman for hours due to his very down-to-earth personality and how he presented himself as a physician and a person. Thank you again and we hope to be updating you in the near future of a baby on the way."

Another patient says, "Dr. Hickman and staff are absolutely amazing in every way. We had a reversal done in January of 2021 and our daughter was born March 10th, 2022. Dr. Hickman was very thorough and set real expectations from the beginning, you feel the love he has for what he does and the love his staff has for what they do. I highly recommend using Dr Hickman. We flew from VA to see him. He will forever be a huge part of our life. Thank you, Dr. Hickman and staff."
