AI in Digital Reputation: Get Dandy's Unique Tech for Online Reputation Automation

January 08, 2024

Irvine, California - January 08, 2024 -
GetDandy, an Irvine, CA based reputation automation company, is offering an artificial intelligence (AI)-driven platform that is capable of automatically eliminating unfair and underhanded online reviews. GetDandy?s approach is distinctive in the field of digital reputation management is the use of AI technology, which makes it the first AI-powered reputation automation provider. This assures the business that they will only receive genuine feedback from legitimate sources and that any bad faith or misleading reviews are eliminated from review aggregator platforrms. More about this can be gleaned from https://www.usatoday.com/story/special/contributor-content/2023/07/26/getdandy-ai-powered-platform-that-removes-bad-online-reviews/70470468007/.

GetDandy offers a suite of services for automated digital reputation management, such as: review removal, review aggregation, reputation management, reputation monitoring, review generation, surveys, reporting, guest feedback QR code, and automated review reply. The review removal service is used to eliminate unjustified reviews on the business? Google page and other platforms. The GetDandy AI assistant called Dani evaluates the bad reviews on the business? Google page and disputes it with Google and helps to get rid of the bad reviews. Next, Dani will help monitor and optimize the local keyword rankings to ensure that the

business ranks among the top five. Finally, Dani monitors and helps in enhancing the results of the work done.

The review aggregation service gathers all of the reviews for the business in a single dashboard to help save time and allow the client to be aware of how customers are reviewing them across the most popular review platforms. The dashboard also has a text and email feature that allows the user to send out requests for new reviews from clients to help improve the company?s reputation on the various review sites. All of these reviews can be monitored through the GetDandy dashboard, allowing the business to take control of its online presence and win more customers as its reputation improves.

The reputation monitoring service offers the best way to protect the online reputation of a business. This is important because it has been observed that just one negative review can cause a business to lose around 30 customers. With this service, the reviews are checked to find out if there are any false and defamatory reviews.

The review generation service connects with Google, TripAdvisor, Facebook and other platforms and the dashboard allows the user to send out email or text surveys to customers to encourage them to leave a review about the business if they have not yet done so. With this service, the client is able to get insights as to how customers view the business. Meanwhile, the new reviews resulting from this can also help with SEO, which further improves the business? online reputation.

The guest feedback using QR codes helps to encourage guests to leave their feedback wherever they are. Using the dashboard, merchants can simply print QR codes for each of their store locations and place these around the store. Guests can simply scan the QR code and this results into the business getting the customer?s information and the guest leaving a review. Negative reviews and recommendations are kept confidentially in the GetDandy dashboard and the positive reviews are shared on review sites chosen by the client, such as Google and more. These QR codes may be used in hotels, restaurants, medical clinics, home services, and more.

GetDandy can also help the client to install webchat to their website with just one line of code. Every time a customer or prospect uses the chat widget, they get notified by SMS or email.

Founded in 2020, GetDandy is a provider of AI/ML reputation automation software that can detect if there are any fraudulent reviews an enable the business and its clients to challenge those fake reviews with the specific review platform host. This can allow the business to avoid getting negatively affected by malicious, unjustified, and fallacious reviews.

Those who would like to know more about the GetDandy process of removing bad online reviews can visit their website or contact them through telephone or via email.
