Dental Implants Tasmania Specializes on All on 4 Dentistry and Dental Implants

January 24, 2024

Launceston, Tasmania - January 24, 2024 -
Dental Implants Tasmania, a dental practice based in Launceston, Tasmania, Australia, takes pride in offering quality dental implants, especially All on 4 dental implant dentistry in Tasmania. All on 4 implants can offer an innovative way of improving a person?s smile as well as overall oral health, well-being, and general health. All on 4 implants, which are also known as full-mouth dental implants, allow a full arch of teeth to be supported with just four or six implants. It has the advantage of being faster, less invasive, and appropriate for more patients, compared to conventional implants.

Dr Bing Lee from Dental Implants Tasmania says, ?If you?ve been suffering from damaged or missing teeth or are unsatisfied with your dentures, you may be wondering what the best treatment option is for you. The All on 4 implant procedure offers an innovative approach to restoring your smile. Using only four dental implants, this advanced technique provides comprehensive support for an entire arch of teeth.?

The All on 4 dental implant procedure is an innovative technique for implants that has transformed the field of implant dentistry. The basic idea is similar to that of typical dental implants where the root of a missing tooth is replaced by a titanium screw that is surgically implanted into the jawbone. Over time, the bone fuses with the titanium implant providing a strong foundation on which an artificial tooth can be attached.

The innovation of All on 4 comes from the unique angle of the implants, which allows them to avoid bone-deficient areas of the jawbone. This is what makes the treatment suitable for more people. With the conventional dental implant procedure, those who have a bone-deficient part of the jawbone where an implant is supposed to be placed, are considered not suitable for the procedure. With the technique of positioning the implants at an angle to avoid bone-deficient areas, more people can qualify for the procedure.

In addition, with the conventional dental implant procedure, eight or more implants would be needed to support a full arch of teeth. On the other hand, with the All on 4 technique a full arch can be supported by just

four implants, which makes the procedure faster to complete and less invasive. This means that the healing process will be shorter, which is certainly a benefit for the patient.

The All on 4 implant procedure has three key stages. The first stage is the initial consultation. An experienced full arch implant dentist at Dental Implants Tasmania will evaluate the patient?s oral and general health and consider any health conditions that may have an impact on the success of the treatment. They will also take 3D X-rays to get a complete picture of the mouth and jawbone of the patient.

The second stage is the placement of the implants. The procedure will be done with the patient under anesthesia. A highly trained implant dentist will place the dental implants. This procedure will require just a few hours after which, the replacement teeth will be fitted to the implants. The last stage is the after care to ensure proper care for the implants.

Dental Implants Tasmania, which belongs to the Innova Dental practice, was started by Dr. Bing Lee and his wife, Dr. Fay Chan. It is their vision to offer the most advanced restorative dental procedures in Launceston and throughout the Tasmanian community. Dental Implants Tasmania is a purpose-built clinic that employs cutting-edge technologies to offer the best possible treatment for the patient. Dr. Bing Lee is a native of Singapore but he later moved to Australia where he received his dental degree from the University of Queensland in 2013. After graduation, he joined a local dental practice where he gained a lot of experience in different types of dental procedures, ranging from root canals to tooth extractions. The practice he worked for was one of the earliest adopters of CEREC technology, which enabled him to discover the benefits of advanced dental technology.

Those who would like to know more about All on 4 dentistry and other types of dental implants can check out the Dental Implants Tasmania website or contact them on the phone or through email.
