

Westland Data Now Accepts Cryptocurrency Bitcoin For Sweepstakes Leads

December 24, 2015

December 24, 2015 - PRESSADVANTAGE -

Westlanddata.com, a business in Dateland, Arizona, has announced that they now accept Bitcoin for the purchase of sweepstakes leads. They are proud to embrace this new technology which will help save their international clients both time and money. Clients have already responded very positively about this change. Details are available at <http://westlanddata.com>.

"Bitcoin is no longer the currency of the future, it is the currency of today," says Steve Dixon from Westlanddata.com. "As an online business, we must remain up to date with trends in order to remain current, which is why we have decided to add Bitcoin payment capabilities to our site. We're glad to see that this is being well received, not just by our international clients, but actually by all."

Bitcoin is a type of digital currency. It is created and held completely electronically. Nobody has control over it, as it is not printed like normal currency. Rather, people produce bitcoins through a piece of software that solves mathematical equations. Nowadays, more and more businesses also create them through computers all over the world. Bitcoin is the first type of cryptocurrency, which is a system that is becoming increasingly popular. The currency enables businesses to come one step closer to being truly global, as there is no

central bank that controls it and determines which country the currency belongs to.

Westlanddata.com, meanwhile, supplies lists from all over the world and is glad to be able to say "Bitcoin accepted now." These lists include email and telemarketing lists. They pride themselves on their affordability and high quality products. Customers have been very pleased with the work completed by Westlanddata. "Thanks again for helping me. I just want to say your level of attention to your buyers on providing support has been amazing," says Felix Aquino from the Philippines. "Now that I am using sweepstakes leads, my sales have gone way up and everyone is making more money."

Now that the company accepts bitcoin as currency, they have immediately propelled themselves forward on the international market. They are one of the first businesses of their kind to embrace this new digital currency, something that many other businesses are likely to follow very soon.
