Invisalign Clear Aligners Offer an Invisible Way to Straighten Teeth and Improve a Person's Smile

February 06, 2024

February 06, 2024 -

Sensational Smiles Dental is happy to announce they offer Invisalign clear aligners as an invisible way to straighten teeth and enhance a patient's smile. This is in contrast to conventional metal braces and wires that are effective in correcting crooked or misaligned teeth but are too obvious and also cause discomfort. With Invisalign, a more comfortable and virtually invisible way to straighten teeth, is now available. Invisalign represents a game changer in straightening teeth, which offers not just more comfort but a more discreet treatment.

Dr. Michael Shehata, founder of Sensational Smiles Dental, says, "Clear aligners work by gently applying controlled force to specific teeth, gradually guiding them into their ideal positions. The treatment process involves a series of aligners, each slightly adjusted to encourage tooth movement. Patients typically wear each set for about two weeks before progressing to the next in the series. Clear aligners have become a preferred choice for people seeking orthodontic solutions, offering a more comfortable and convenient alternative to traditional braces. They are especially beneficial for those with mild to moderate misalignments, providing a discreet path to achieving a beautifully aligned smile without the aesthetic concerns or inconveniences associated with traditional metal braces."

Invisalign, which was developed by Align Technology, was the pioneering brand of clear aligners. The aligners are constructed from a patented and proprietary SmartTrack material that has become popular because of its comfort, flexibility, and clarity. Furthermore, the aligners are custom-fitted for each patient's specific treatment plan, using cutting-edge 3D scanning and treatment planning technology.

They want to point out that while other brands may seem to provide similar treatments and products, they don't all function in the same way and offer the same advantages. There are a number of advanced benefits provided by Invisalign. These include: quicker treatment time, improved fit, comfortable treatment, advanced scope, and compliance tracking. First of all, the Invisalign material enables the aligners to be changed each week rather than fortnightly, thus, accelerating the treatment process.

Second, the SmartTrack material fits more snugly, which means more comfortable wear and the aligners are assured not to become loose. Third, Invisalign aligners don't need to exert extra force, unlike other aligners, because the SmartTrack material holds constant pressure, allowing for significantly less pain. Fourth, Invisalign can also correct underbites, overbites, and crossbites. Lastly, Invisalign has a blue compliance indicator that fades over time to make sure that the aligners are worn for the length of time that is needed to achieve the desired effect.

The Invisalign treatment process has four major stages. The first stage is the consultation process. It is during this stage that they perform an initial evaluation provided by their experienced Invisalign dentist. The oral health will be assessed using 3D scans and developing a customised treatment plan and the intended results after the completion of the treatment. The second stage is the actual treatment process. The patient will be provided with their own set of personalised aligners. Each aligner has to be worn for 22 hours a day and then replaced with a new aligner every one to two weeks, according to the treatment plan. The third stage is the monitoring part. And the last stage is support after the completion of the treatment. A retainer may be recommended to help the teeth stay in place.

Started in 2010 by Dr. Michael Shehata, Sensational Smiles Dental is a dental practice in the Sutherland Shire of Sydney, NSW, Australia, that provides a full range of general, preventive, orthodontic, implant, pediatric, and cosmetic dental services. Dr. Michael Shehata obtained his degree from Griffith University in Queensland, placed second in his cohort, and became a member of the Golden Key Club for Academic Excellence. He served as an associate dentist for a number of years before deciding to found Sensational Smiles. He has obtained trained in: orthodontics, implant dentistry, cosmetic dentistry, and bite reconstruction. He has recently completed an intensive international orthodontic program and garnered first class honours in this program.
