

Clipper Construction Advises on Material Selection for Commercial Buildings

March 12, 2024

BALTIMORE, MD - March 12, 2024 - PRESSADVANTAGE -

Baltimore, MD - Clipper Construction, a leading commercial general contracting company based in Baltimore, Maryland, is advising on material selection for commercial buildings, emphasizing its importance in ensuring high-quality, sustainable, and aesthetically pleasing outcomes for their clients.

"Material selection is not just about picking what looks good; it's about choosing the right materials that align with the project's goals and requirements," says the spokesperson of Clipper Construction. "We work closely with our clients to understand their needs and recommend materials that offer the best combination of performance, sustainability, and cost-effectiveness."

With a deep understanding of the construction industry, Clipper Construction recognizes that the choice of materials significantly impacts various aspects of a project. From durability and energy efficiency to maintenance costs and aesthetic appeal, each material brings unique advantages and considerations to the table.

Steel, concrete, wood, and masonry are among the primary structural materials used in commercial construction. Each material has its strengths and limitations, making careful consideration crucial for optimal results. Steel, prized for its strength and flexibility, is ideal for tall buildings and large spans. Concrete offers durability and fire resistance but requires significant energy for production. Wood is renewable and lightweight, suitable for low-rise structures, while masonry provides excellent thermal mass but may be labor-intensive.

Exterior finishing materials such as siding, stucco, brick, and glass offer varied aesthetics and functional qualities. Siding, typically made of vinyl, wood, or fiber cement, presents a versatile range of colors and textures, requiring minimal maintenance but may lack insulation. Stucco, a cement-based material, provides a smooth or textured finish, excellent weather resistance, and moderate insulation but demands periodic repainting. Brick, renowned for its timeless appeal and durability, offers superior insulation, minimal maintenance, and exceptional weather resistance, albeit at a higher initial cost. Glass, while less common as a primary exterior material, lends a modern aesthetic, ample natural light, but requires careful maintenance and offers limited insulation.

Several roofing materials are commonly used in commercial buildings, including asphalt shingles, metal, EPDM, and green roofs. Asphalt shingles are popular for their affordability and ease of installation, though they have a moderate lifespan of around 20-30 years. Metal roofs offer durability and can last 40-70 years, but they typically have higher installation costs. EPDM (ethylene propylene diene terpolymer) roofs are known for their excellent weather resistance and can last up to 50 years, although they may require more maintenance. Green roofs, featuring vegetation and soil, provide natural insulation and improve energy efficiency, but they have higher initial costs and require specialized installation expertise.

When it comes to interior finish materials, such as drywall, paint, flooring, and ceiling materials, considerations for aesthetics, durability, and indoor air quality are paramount. Clipper Construction emphasizes the importance of selecting materials that not only enhance the visual appeal but also contribute to a healthy and comfortable indoor environment.

Clipper Construction also acknowledges the growing importance of sustainable building materials and energy-efficient building systems in commercial construction. "Sustainability is a key consideration in modern commercial construction," adds Clipper Construction's spokesperson. "We encourage our clients to explore eco-friendly options, such as recycled materials and low VOC products, to minimize environmental impact and promote occupant health."

Clipper Construction's commitment to excellence extends beyond material selection. With a focus on client satisfaction and sustainable practices, they strive to deliver exceptional results while minimizing the project's

ecological footprint.

Clipper Construction was established to provide contracting services for the retail industry. They are commercial general contractors serving the greater Baltimore metropolitan area. Their professionals have executed projects in a variety of industries including restaurants, warehouses, laboratories, offices, education, retail, and grocery. The commercial construction company also provides design and build services, commercial tenant improvement construction, commercial interior renovation, commercial site development, and more. They offer commercial general contractor services in Baltimore and the surrounding areas: Columbia, Annapolis, Rockville, Bethesda, Gaithersburg, Potomac, Germantown, Laurel, and Washington D.C.

For commercial building owners seeking general contracting and commercial construction services in Maryland, additional information can be found on the Clipper Construction website or call them at (443) 323-1880. They are open from 6:00 am to 7:00 pm, from Monday to Friday.
