Dental Implants Tasmania Expands its Services, Elevating Restorative Dentistry Standards

March 05, 2024

Launceston, Tasmania - March 05, 2024 -
Dental Implants Tasmania, a premier dental implants provider, is excited to announce the expansion of their procedures to include cutting-edge restorative dental techniques. As a specialized department within the trailblazing Innova Dental practice, Dental Implants Tasmania persists in its commitment to outstanding patient care, now launching advanced digital technology into its assortment of treatments.

Dr. Bing Lee, co-founder of Dental Implants Tasmania, explained, "Our aim has always been to provide our patients with the highest standard of care. Our dental implant procedures, including Full Arch Implants ? also known as the All on 4 technique, are designed to deliver long-lasting and natural-looking tooth replacement solutions. We are proud to take another step forward with the implementation of Primescan and 3D printing technologies."

Notably, Dental Implants Tasmania specializes in various implant procedures including the All on 4 treatment. This technique involves the installation of a complete upper or lower set of teeth, upheld by only four or six implants. The unique angle of these implants permits avoidance of areas with bone deficiency while securing optimal strength and stability. Consequently, patients can anticipate a minimally invasive process accompanied by speedy recovery times.

Besides its surgical treatments, Dental Implants Tasmania emphasizes patient-centered care, incorporating Dental Anxiety Management. The company recognizes that dental procedures may cause anxiety for some individuals, and has thus assembled a dedicated team tasked with providing reassurance and warmth from reception through treatment coordination and execution.

"Understanding and managing dental anxiety is integral to our approach. We aim to ensure our patients have a comfortable and well-informed experience at every stage of their treatment journey," stated Dr. Bing Lee.

Dental Implants Tasmania, by leveraging advanced digital technologies like Primescan and 3D Printing, has enhanced the implant application process. These technologies enable the generation of intricate 3D models of a patient's oral structure, useful for surgical guides aimed at precise implant alignment.

Dr. Bing went on to say, "With these latest advancements, we are aiming to streamline the treatment process and increase patient comfort. The need to visit private hospitals for oral surgery or wait for external laboratories to create replacement teeth has been significantly reduced."

As a top Implants Dentist in Launceston, Dental Implants Tasmania is consistently raising the standard for restorative dental procedures throughout the Tasmania community. By integrating superior technology, clinical expertise and personalized patient care, it delivers exceptional tooth replacement solutions.

Detailed information about their dental implant procedures, as well as their full range of services, can be found on the Dental Implants Tasmania website. Their innovative spirit and unyielding dedication to improved patient experiences emphasize their position as a leader in dental care.

Highlighting the ethos of Dental Implants Tasmania, Dr. Bing Lee stated, "Our mission is to leverage the best of technology and clinical practices to improve the lives of our patients, one smile at a time." Through knowledge, dedication, and advanced techniques, Dental Implants Tasmania offers an all-encompassing approach to dental care, reinforcing the perfect balance between health and aesthetics.
