5 Head Cold Climate Ductless Heat Pump Installation in Cascade, Idaho Makes Log Cabin Comfy

March 14, 2024

Boise, Idaho - March 14, 2024 -
Peppy Heating and Cooling, a respected HVAC contractor, has recently finalized a comprehensive case study on a 5 Head Cold Climate Ductless Heat Pump Installation in Cascade, Idaho. The details outlined in the case study demonstrate how the firm offered an efficient and effective heating solution for a uniquely constructed log cabin situated in a challenging geographical location.

Renowned for their myriad services such as HVAC system installation, repair, and ongoing maintenance, Peppy Heating and Cooling also stands out due to its proven expertise in ductless system services. Highlighting both the challenges they faced and their innovative solutions, Brett Shannon, President of Peppy Heating and Cooling stated, "A great customer of ours was looking for a way to heat and cool their cabin in Cascade Idaho. It is a beautiful log cabin that had no air conditioning system and the source of heat was a fireplace and electric baseboard heat. Electric baseboard heat is expensive and the big fireplace took lots of wood and did not help heat all of the bedrooms and areas of the home. We were able to find the perfect solution for this home by installing a 5 head Hyper Heat Ductless Heat Pump system! The Hyper Heat Cold Climate heat pump can heat down to -13F and is the perfect solution for the cold Cascade Idaho winters."

The case study offers a thorough examination of the unique challenges presented by this particular project. The main test lay in the design of a system that could keep all the spaces in the cabin comfortable throughout the year, which was not easy due to the rough-cut log walls. The experts at Peppy Heating and Cooling surmounted this hurdle by installing Multizone ductless systems with Hyper Heat outdoor units, specifically designed for Cold Climate conditions. They placed 3 GL white wall mount heads in each of the bedrooms and 2 EF Designer Black heads in the living room and the kitchen/dining area. The outdoor units were installed a few feet off the ground to guarantee smooth operation even during heavy winter snowfalls.

Upon finishing this project, Shannon expressed his satisfaction, stating, ?The customer was able to identify a whole house comfort solution that was efficient, durable and quiet. We also installed the Black EF designer

heads, which seamlessly matched the rustic logs in the log cabin.? Supplementing this installation's credibility was an in-depth cost-benefit analysis. It revealed that the cost of installing a ductless system and the subsequent energy savings far outweigh those of other solutions such as an electric forced air furnace or maintaining the existing baseboard heat.

Considering Cascade's weather and other unique challenges, this robust case study is a valuable resource not only for Cascade residents but also for those living in other Idaho regions such as Boise, Nampa, Meridian, Caldwell, Eagle, Payette, Fruitland and Emmett. Peppy Heating and Cooling?s commitment to customer contentment is reflected by their willingness to share useful resources such as this case study, and providing a blog, additional case studies, a Comfort Club, coupons, HVAC tax credits, as well as posting some of their 5-star reviews.

In conclusion, this case study underscores that distinct spaces with difficult heating and cooling requirements can effectively benefit from ductless systems. Peppy Heating and Cooling's dedication to offering solid and energy-efficient solutions along with their successful projects like the Cold Climate Heat Pump Installation in Cascade, Idaho, strongly signals their capacity to provide customer-focused, superior service.
