

Rimex Metals Amplifies Production of Water Rhythm Series to Meet Surging Demand

May 07, 2024

May 07, 2024 - PRESSADVANTAGE -

Rimex Metals, a leading UK-based manufacturer specializing in surface finishes on stainless steel and other metals, has recently announced a significant increase in the production of its sought-after Water Rhythm stainless steel finishes. The decision comes as a response to the heightened demand for these distinctive designs, prominently used across a diverse range of sectors including architecture, interior design, and beyond. The Water Rhythm collection, distinguished by its large-scale, three-dimensional manipulation of stainless steel sheets, yields a fluid yet distorted visual effect, captivating the design and architectural communities globally.

Nick Barnes, Sales Director of Rimex Metals, shared his views on this strategic move, "The Water Rhythm series represents Rimex Metals' dedication to pioneering in the realm of metal finishes. Witnessing the surge in demand for these unique patterns, it became evident that scaling up our production was necessary. Our goal is to streamline the availability of these high-grade materials for our clients' projects, thereby enabling them to execute their visionary designs with our superior finishes."

The Water Rhythm series is engineered for versatility, with options available in its natural silver - SuperMirror

finish, alongside the choice to combine this with the colorful T22? mirror range. This diversity in finishes allows for creative applications across numerous project types, ranging from feature walls and columns to ceilings and large-scale cladding endeavors. For a comprehensive view of the Water Rhythm series and the array of finishes offered, those interested are directed to visit <https://www.rimexmetals.com/products/water-rhythm>.

In addition to direct engagement through their product offerings, Rimex Metals has made a concerted effort to connect with clients and the broader audience via social media platforms. A specific highlight on their Facebook page showcases the compelling characteristics of the Water Rhythm series, illustrating its potential to revitalize spaces with its dynamic patterns and light interplay. This post, among others, can be viewed and interacted with on Rimex Metals? Facebook community at <https://www.facebook.com/rimexmetalsgroup/posts/pfbid02efz5aqBABBmc2NKQLfmugFSgPUhDMvod5z8w4Axx4vku3sn47afkvxYPabivFxfdl>.

Nick Barnes elaborated on the distinct appeal of the Water Rhythm series, stating, "What sets the Water Rhythm series apart is its inherent ability to capture and play with light, creating a sense of movement and life within any given space. With the increased production capacity, we are keen to witness the innovative ways in which designers and architects incorporate these finishes into their projects, pushing the boundaries of creativity and design."
