

Canadian Water Compliance Introduces Comprehensive Oils and Grease Water Testing Services

May 07, 2024

TORONTO, ON - May 07, 2024 -
Canadian Water Compliance, a leading provider of water quality management solutions, is pleased to announce the launch of its new Oils and Grease Water Testing Services. This expansion comes in response to growing customer demand for reliable and accurate testing to identify and manage the risks associated with oily residue in water systems.

Oils and grease contamination can lead to severe consequences for businesses, public health, and the environment. When left unchecked, this contamination can cause damage to plumbing infrastructure, contribute to environmental pollution, and result in non-compliance with regulations. Recognizing the importance of addressing this issue, Canadian Water Compliance has developed a comprehensive testing program to help businesses and properties effectively manage oily residue in their water systems.

"We are excited to introduce our Oils and Grease Water Testing Services to our clients," said Kevin Mork,

Chief Operating Officer of Canadian Water Compliance. "Our team of certified industrial hygienists and trained specialists uses the OSS ClearShot Methodology to provide accurate and reliable results. This allows us to deliver comprehensive reports that include testing results, recommendations, and guidance on next steps."

The OSS ClearShot Methodology involves collecting water samples from various points within a water system, extracting any oils and grease present using a solvent, and analyzing the extracted material using infrared spectroscopy. This proven approach ensures that even trace amounts of oily residue are detected, enabling businesses to take proactive measures to address the issue.

Canadian Water Compliance offers a range of oils and grease water testing services tailored to the needs of businesses and properties across various industries. These services include routine testing for compliance purposes, investigative testing to identify the source of contamination, and post-remediation testing to confirm the effectiveness of cleanup efforts.

"By investing in regular oily residue testing, businesses can protect their infrastructure, comply with regulations, safeguard the environment, and contribute to overall water quality," added Mork. "Our experienced team works closely with clients to develop customized testing plans that meet their specific requirements and budget. When you choose Canadian Water Compliance for your oils and grease water testing needs, you benefit from our expertise, state-of-the-art equipment, and commitment to exceptional customer service."

The launch of the Oils and Grease Water Testing Services is part of Canadian Water Compliance's ongoing efforts to provide comprehensive water quality management solutions to its clients. The company's team of experts is dedicated to helping businesses navigate the complex landscape of water quality regulations and best practices.

"In today's world, responsible water management is not just a choice ? it's a necessity," concluded Mork. "We are committed to helping our clients protect their businesses, the environment, and public health through effective water quality management. Our new Oils and Grease Water Testing Services are just one more way we are delivering on that commitment."
