# Dental Implants Tasmania Revolutionizes Smile Restoration with All on 4 Implants Technique

*May 16, 2024*

Launceston, Tasmania - May 16, 2024 -
Dental Implants Tasmania, renowned for its advanced restorative dental procedures, proudly offers expertise in a transformative dental implant technique known as All on 4 implants. This cutting-edge method enables the complete replacement of either an upper or lower set of teeth using only four implants, facilitating a simpler yet highly effective solution for individuals seeking dental restoration. In contrast to traditional implant methods that typically require between 6-8 implants for a full arch, the All on 4 technique takes advantage of the higher bone density found in the anterior maxilla, thus diminishing the number of necessary implants.

Central to the success of All on 4 implants is its strategic implant placement methodology. The procedure uniquely positions the posterior implants at a 45-degree angle, directed towards the back of the mouth. This orientation is not accidental but designed to optimize the areas of the jaw with superior bone density. Such an approach does not only broaden the candidacy for the procedure, accommodating those with less bone mass, but it also sidesteps the requirement for more aggressive bone grafting techniques. The result is that patients benefit from a swifter, more comfortable recovery period, rendering All on 4 Dentistry a compelling choice for many.

Dr. Bing Lee, a co-founder at Dental Implants Tasmania, speaks to the technique's innovation, saying, "The All on 4 implants technique marks a revolution in restorative dentistry. With its requirement for fewer implants compared to traditional techniques, we're able to offer our patients a solution that is less invasive, quicker, and often more budget-friendly. This method not only fast-tracks the treatment process but reduces its complexity substantially, positively impacting our patients' recovery and overall treatment experience."

The clinic's reliance on cutting-edge dental technologies greatly contributes to the high success rates of All on 4 Dentistry. Through advanced imaging and precise surgical planning tools, the team at Dental Implants Tasmania can ensure precise implant placement. This meticulous planning procedure allows each treatment to be specifically customized, aligning with the patient's unique anatomical features and aesthetic

preferences.

"All on 4 Dentistry is a significant achievement in the field of implantology. It exemplifies the progressive strides being made in dental technology and methods, enabling us to offer functional and aesthetic restoration that was once thought to be unachievable for some patients. We are proud to provide this innovative service as part of our dedication to offering holistic, patient-centered dental care," Dr. Lee states.

All on 4 implants stands as an advantageous proposition for those contemplating dental implants. It simplifies achieving a complete, natural-appearing set of teeth and extends this possibility to individuals who may have previously been considered unsuitable for traditional implants due to inadequate bone density. With a blend of expert knowledge, state-of-the-art technology, and a commitment to patient care, Dental Implants Tasmania is at the forefront of restorative dental solutions, continuously improving patient results and bringing smiles back across Tasmania.
